NATIONAL LIBRARY OF MEDICINE

A GUIDE TO THE ART COLLECTION

U. S. DEPARTMENT OF
HEALTH, EDUCATION, AND WELFARE
Public Health Service

The art collection of the National Library of Medicine covers a wide range of illustrations relating to medicine and the allied sciences. Among the 60,000 or more items in the collection are original woodcuts, etchings, fine engravings, and oil paintings on a variety of subjects from ALCHEMY to YELLOW FEVER. Other pictorial items include portraits of the great men of medicine, photographs of military and civilian hospitals, pictures showing medical treatment and its progressive development, and many other nonclinical illustrations revealing the art and science of healing through the ages.

PORTRAITS

One of the largest of its kind, the Portrait Collection contains over 28,000 portraits, in a variety of media, of outstanding men and women of medicine, of yesterday and today. Portraits of all Nobel Prize Winners in medicine and physiology are among the many portraits in this growing collection.

MEDICAL CARICATURES

Medical satire is reflected in a large collection of caricatures, in color and black-and-white, by a variety of well-known artists such as Rowlandson, Cruickshank, Hogarth, and Daumier.

MISCELLANEOUS PICTORIAL ITEMS

The pictorial history of medicine is also revealed in a collection of lantern slides, maps, posters, hospital plans and sketches, and in a "library" of book-plates of physicians and medical institutions.
