#### INTRODUCTION.

ment is clearly shown, from the emirro of the eighth day to the complete focus. This extensive stries of natural propagations is

In calling public attention to the superb Models and Specimens of the Human Body, which forms so interesting a feature in the New York Museum of Anatomy, it may be proper to state, that the primary object has been to enable the thinking mind fully to comprehend the wonders of the human structure, whilst the familiar classification and descriptive accounts attached to the various articles in the collection enable the non-medical visitor to turn the In stitution to real practical account, in the acquirement of knowledge, which is not now, as was formerly the case, confined to the mere professional student.

To those laboring under diseases much useful knowledge will also be acquired, by a study of the Pathological division of the Institution. Here the marvellous reality with which the effects of certain diseases are delineated, speak the skill of the anatomical artist, whilst they convey a powerful moral lesson of the deceitfulness of vice, which, amidst its most seductive allurements, leaves so fearful an impress indelibly marked on the human frame.

From the great extent and varied excellence of the subjects in the Institution, it is difficult to particularize their individual claims to attention. But it must be sufficiently obvious that the extraordinary work of artistical skill described at No. 459, possess merit of a very high order. By the temporary removal of a portion of the body, we have placed before us all the most important organs; so that, without pursuing our investigations in the "blood and filth of the dissecting room," which was formerly considered indispensable, we may fully comprehend the whole of the secrets of nature's handiwork.

The wonders of *Embryology* are fully exhibited in the interesting series of natural preparations, preserved in spirits of wine, in this division of the Institute. The labor of preparation will readily be understood by a reference to the fact that every stage of development is clearly shown, from the embryo of the eighth day to the complete fœtus. This extensive series of natural preparations is preceded by views of the uterus and vagina, which have also excited great interest, for their perfect illustration of the scientific anatomy of the subject.

In the Works of Art which form so important a feature of attraction in the Institution, great care has been paid to the selection of subjects which bear on the beauties of the human form. Thus, whilst a figure, the size of life, gives a perfect representation of the muscular arrangement by which motion is imparted, the perfection of feminine beauty is exquisitely portrayed in the large figure of Venus, and the great and world-renowned Gertu, by eminent Italian masters. The same remarks apply to the pictures which adorn the walls of the building.

But in the list of anatomical and physiological wonders that present themselves to the visitor, we must not omit to notice some of the extraordinary cases where a direct departure from the ordinary structural arrangements present themselves. Thus a "Child with the Tail of a Fish" is in the immediate neighborhood of a "Boy with Two Faces," whilst another example of a real child with "One Head united to Two Bodies" may be considered as a lusus naturæ of no ordinary interest.

body, we have placed before us all the most important organs; so

ful an impress indelibly marked on the human frame.

#### CATALOGUE

OF THE

#### New-York Museum of Anatomy.

- 1 The inferior maxillary bone or under-jaw; the anterior position projects inferiorly into the mental process or chin; superiorly, it is surmounted by alveoli for the teeth; anteriorly, it has on each side a depression for muscles; and posteriorly, eminences and depressions for muscles.
- 2 The skuil of Sani, executed by the Emperor of Russia for robbing the St. Petersburg mail-coach.
- 3 Bones of the foot of the lion Wallace, who killed his keeper and four men, at the Zoological Gardens, Liverpool, May, 1854.
  - 4 Scapula or shoulder-blade of the lion Wallace.
  - 5 Bones of the lion Wallace.
- 6 Great curiosity—The Hoof of Dick Turpin's celebrated mare. "Black Bess,"
  - 7 Skull of a Seal.
  - 8 Upper and lower jaw of a Shark.
- 9 Skull found in Oxford street, London, while the men were repairing the roads.
  - 10 A beautiful specimen of the foot.
- 11 Skull of the celebrated Will Somers, jester to King Henry VIII., procured by the proprietors at great expense.
- 12 The pelvis of a female—a (basin) cavity formed by the os innominata and sacrum.
- 13 Polvis and spinal column of the Ostrich. Great curiosity, as they are seldom captured.
  - 14 Male pelvis.
- 15 Great freak of Nature. Ossified bone found in the year 1848, at Winchester Cathedral, England, the burial-place of Richard III
  - 16 Bones of the leg found at the ruins of Pompei.
  - 17 Bones of the arm found at the same time.
- 18 Ancient and magnificent specimen of the wild boar, showing the olfactory nerves.
  - 19 Male scapula or shoulder-blade.

20 Skull of the bear Von Cruro, who killed Mr. Thomas Roberts, of Belvue, Manchester, and was shot by his keeper.

21 Foot of an animal shot in the Home Park, Windsor, near London, by Henry VIII., presented to the proprietors by an antiquarian.

22 Petrified hoof of an animal unknown, found among ruins at

Rome.

23 Section of the skull and vertebræ.

- 24 Thorax and vertebral column of a female.
- 25 Spinal column of a seal.
- 26 Bones of the spine or vertebræ.
- 27 The full length skeleton of Henri Jacques, who was sentenced to death in Paris for murdering his wife and three children. In a fit of jealousy he cut their throats. He died in prison thus escaping the guillotine. He confessed on his death-bed, and also stated he had, when quite a child pushed a playmate into the river, and held his head under the water till he was drowned. He could assign no cause for his propensity; but an inspection of his phrenological developement will show the great preponderance of the animal passions.
- 28 The skeleton of Mr. Alfred Shooney, aged 32, who resided at St. Ives, Cornwall, England. He was only 4 feet high, and died in the Union of that town.
  - 29 Magnificent skeleton of a six months' child.
- 30 Beautiful model of a well-developed nine months' child. Allits proportions are perfect and symmetrically moulded.
- 31 Fœtus, three months, with umbilical cord. A wonderful freak of Nature.
- 32 Young Crocodile. from the banks of the Nile. Presented to the proprietors by Dr. Livingstone, the great African traveler.
- 33 Chicken with four wings and four claws; one of the greatest curiosities in the world.
  - 34 Large Tape-Worm.
  - 35 Another species of Tape-Worm.
  - 36 Another species of Tape-Worm.
  - 37 Left and right kidney, preserved in spirits of wine.
  - 38 Showing the first month of pregnancy.
  - 39 Showing the second month of pregnancy.
  - 40 Showing the third monih of pregnancy.
  - 41 Showing the fourth month of pregnancy.
  - 42 Showing the fifth month of pregnancy.
  - 43 Showing the sixth month of pregnancy.
  - 44 Showing the seventh month of pregnancy.

- 45 Showing the eighth month of pregnancy.
- 46 Showing the ninth month of pregnancy. These beautiful models, nine in number, illustrate the different changes and positions naturally) the child undergoes in the womb, from the first to the ninth month of ultro-gestation or pregnancy. A careful inspection of these can not fail to bring to remembrance the words: "We are fearfully and wonderfully made." The duration of pregnancy varies. Generally it lasts nine calendar months, forty weeks, or 280 days, or the tenth menstrual period.
  - 47 Magnificent dissections of the arm and hand.
- 48 One drop of male Semen, or Seed of Nature, which is magnified 500 times. In cases of impotency this does not exist in the system, and in order that conception should take place it is necessary that one of those spermatozoa should attach itself to the ovum or egg in the female ovary.
  - 49 Fine dissection of the leg.
  - 50 Anatomical head and bust, very fine.
  - 51 Fine dissection of the leg.
  - 52 Dissection of the half-face of a female
- 53 Head of a Hungarian gentlemen, from which grew a horn. This is a perfect freak of Nature.
  - 54 to 56 The mons veneris, vulva, and vagina.
- 57 Head of the African Negro boy who saved the life of Sir John Cox in 1847.

THE AGES, showing the formation of the head and expression of the countenance:

- 58 Childhood.
- 59 Youth.
- 60 Womanhood.
- 61 Old Age.
- 62 Beautiful dissection of the leg, showing its muscles and arteries.
- 63 Deformed foot of Amos Smith, who was executed in London for the murder of his wife and mother-in-law.
- 64 Ophthalmia, or disease of the eye, taken from a patient who was under treatment of the proprietors.
  - 65 Hydrocele, or water in the head.
  - 66 Case of scarlatina, or scarlet fever.
- 67 Variola, or small-pox, a contagious disease divided into two species, the distinct and confluent.
- 68 Scrofula, or king's evil, generally hereditary, though after produced from dissipation or immorality of the parents.

69 Another case of the above in a milder form.

70 Head of the celebrated Madame La Frusch, who lived in Dieppe, to the great age of 140, and two days previous to her death was in possession of all her faculties.

71 to 73 Twins and triplets—two in the membrane, and one laid bare to show its formation.

74 to 75 Three and five months' fœtus.

76 Deformed child in the womb, showing part of the placenta, or after-birth.

77 to 78 Fœtus, placenta, and uterus.

- 79 Hand of Goliah, the celebrated Irish giant, (who was 7 feet high, and measured 175 inches around the chest;) with the skin removed to show the sense of touch.
- 80 Magnificent dissection of the arm, wonderful for its splendid proportions.
- 81 Case of purpura hemorrhagica, or bleeding scurvy. This disease commences with debility, inaptitude for bodily or mental exertion, pains in the limbs, giddiness, more or less followed by an eruption of small round patches of a dark red color, occasionally filled with blood; gums livid, swollen, and bleeding; in some cases it will extend over the entire body.
- 82 This case represents the use of the speculum uteri, by looking up which you can perceive cancer at the neck of the womb.
- 83 This model (from nature) represents cancer of the breast. The precautions for an operation are: Is the constitution unimpaired? Does the tumor remain moveable under the parts diseased, and are the glands in the armpit not much affected?
  - 84 Cancer of the breast, in a different form.
- 85 Wen, or bronchocele goitre. This disease is endemic in certain localities, such as Derbyshire, Switzerland, and high mountainous districts, produced by the use of the water.
  - 86 to 88 Twins, triplets, and malformation of the uterus.
- 89 to 91 Affections of the ear, produced by an impure state of the blood.
- 92 Showing the virginity, or virgin state of the female before copulation.
- 93 Showing the internal parts of the female after copulation.
- 94 and 95 These models should be well looked into by visitors, as they have been pronounced in England, France, and Italy, to be beautifully correct. They are the Aspinall Children, brothers. Their father, Mr. Aspinall, was clerk to the London and North-Western Railway Company. He starved them to death, and was executed in July, 1856. Child No. 95 shows the effects of starvation on the intestines, and also the anatomy of the arm.
  - '96 Skull of Robert Burns, the much-admired Scotch bard.

97 Handsome dissection of the hand.

98 to 102 Ovums, from 21 days to three months.

. 103 Most perfect natural dissection of the heart, liver, gall, bladder and stomach of the lamb.

104 Dissection of the trunk and thighs.

105 The celebrated French general, Le Brune, who, for a political offense, was skinned. He lived in the greatest torture for some time afterwards.

106 Splendid dissection of the head, showing the brains, the trachea or windpipe, the nerves and arteries. This has been highly and justly appreciated as a great work of art.

107 to 108 Tongue, uvula and thorax, showing ulceration in the latter.

109 to 111 Fœtus of three, six, and nine months.

112 Womb, containing a three months' fœtus.

113 A natural specimen of the head, with the teeth preserved, also the tongue and eye, showing the internal structure. The nerves are injected, to trace their source.

114 Tongue magnified, with excoriations at its stump.

115 Child's head compressed, showing that the pelvis of the mother was small in proportion to the size of the head.

116 Splendid figure, showing the muscles of the body.

117 to 118 Twins and triplets in uterus

119 The Cæsarian operation or histerotomy. This figure represents a female undergoing this formidable and dangerous operation. It is of very ancient date, having been performed by the Greeks, but it is supposed that they only employed it to save the child after the death of the mother. This operation is in fact the dernier resort of midwifery. Cæso Fabius was thus born or extracted; also Julius Cæsar, though it is wrong to say he was called Cæsar on this account, because he inherited his name from his father. Among the ancients, persons thus born were considered sacred to Apollo.

120 The fearful effects of tight lacing. All will see in this the evil influences of the once fashionable habit, as in the case before us the mother was pregnant, and from the extreme pressure on the lungs, heart, etc., she dropped down dead in a fit of apoplexy.

121 Much-admired dissection of the leg and foot.

122 Much-admired dissection of the arm.

123 The foot of a Chinese Mandarian, exhibiting extraordinary deformity.

124 Model representing the natural position of the child in utero. The arms are folded on the chest, the knees drawn up over the abdomen, and the head bent on the chest.

125 Case of ovarium tumor, lately in the possession of the College of Surgeons, England, and presented to the proprietors.

126 Enlargement of the liver of a captain in the navy, who, two days before his death, drank the enormous quantity of one

gallon of brandy. This is natural.

- 127 This model represents a case in which the face is in the hollow of the sacrum; and, from the size of the child's head, or the smallness of the mother's parts, the surgeon is obliged to use the forceps. This operation is not so dangerous as it would appear by the model, although in some instances serious consequences ensue.
- 128 Model of the brain. The brain is divided into three portions, viz., the cerebrum, cerebellum, and medulla oblongata. The cerebrum is the largest of the three divisions, is of an oval form, and divided into two equal parts, called hemispheres, by a fissure that extends along the median line, upon its upper surface, and contains the falx cerebri and the arteries of the corpus callosum. At the base of the brain the cerebrum is also divided at each extremity by the median fissure; but in the centre both hemispheres are united upon its under surface.
  - 129 Back view of brain.
  - 130 Side view of brain.
  - 131 Front view of brain.
- 132 A most extraordinary freak of nature, a lamb preserved, found in a sheep after it had been slaughtered.
- 133 Superb small anatomical medel, showing the beautiful and healthy developement of the muscles. We learn the healthy structures of the body by dissection, and the healthy conditions of its functions by close observation.
- 134 Much-admired section of the cranium, showing nerves, arteries, etc.
- 135 to 192 A magnificent, life-sized, anatomical figure. This model is well worthy of inspection, having elicited the highest encomiums from artists and the public in general. It shows 57 muscles of the human frame.
  - 193 Beautiful dissection of the intestines of the female.
  - 194 Perfect representation of the male.
- 195 The tree of life, the only copy in the world, pronounced to be the most elaborate specimen ever beheld.
- 196 Ancient and wonderful specimen of skeletons; copied from a stone found in Palestine, Holy Land.
- 197 Perfect representation of a beautiful woman, which must be admired by the opposite sex.
- 198 A wonderful specimen of a seven months' child, showing life within life.

- 199 A male articulated skeleton, showing the bones, joints and sinews. Back view.
- 200 A male articulated skeleton, showing the bones, joints and sinews. Front view.
- 201 Male figure, with external skin removed, showing the arteries, etc.
  - 202 Back view of the same.
- 203 A magnificent dissection of the arm, with the natural skin thrown over. Presented to the proprietors by the College of Surgeons, England.
- 204 Back view of the brain and spine. Victims of masturbation invariably suffer from affection of the spine or back.
  - 205 Front view of spine and brain.
  - 206 to 208 Magnified tongue with 38 and 60 days' embryo.
  - 209 Fine dissection of the head.
- 210 Healthy semen, or seed of nature, one thousand times magnified.
  - 211 Healthy semen, fifteen hundred times magnified.
- 212 Unhealthy semen, the result of that direful habit, self-abuse; five hundred times magnified.
  - 213 Unhealthy semen, one thousand times magnified.
  - 214 Unhealthy semen, fifteen hundred times magnified.
  - 215 Front view of a life-size skeleton.
  - 216 Back view of the same.
- 217 Beautiful dissection of a child.
  - 218 to 228 Lungs, heart, trachea, or windpipe, the aorta, etc.
- 229 to 230 Beautiful figures, showing the muscles of the entire body.
- 231 Midwifery case, showing the child and after-birth in the womb.
  - 232 Very fine dissection of the leg, taken at Guy's Hospital.
  - 233 Midwifery case, showing twins in the womb.
- 234 Strange posterior found at Rome; the model was found as seen, (in stone.)
  - 235 Chest and abdomen, showing the result of itch.
  - 236 Very fine back view of the male.
  - 237 Very fine front view of the male.
  - 238 Roseola Annulata.
  - 239 to 240 Splendid natural figures.
  - 241 Skeleton of the male, showing scapula, pervis, etc.
- 242 Very fine dissection of a female child, showing the liver heart, kidneys, etc.

243 Midwifery case, showing the head presentation.

244 to 246 Ulcer on the tongue and eye; also, catarrh of the eye.

247 Dissection of the male, showing the chest, liver, etc.

248 Showing the superficial muscles and spine.

249 Skeleton, supposed by the superstitious to have been seen at the church wall in Hampton, England.

250 Beautiful outline of bones and tendons.

251 Midwifery case; showing the umbilical cord and the child undergoing the operation of cranotomy.

252 Deep-seated ulcers of the body.

253 Fine dissection of the head, showing side view of the distribution and position of the arteries, nerves, etc.

254 Back view of the arteries, nerves, etc.

255 Jugular vein, carotid artery, and nerves.

256 Bladder, penis, testicles, prostrate gland and anus.

257 Side view of the ribs, etc.

258 Dissection of the fœtus, placenta and umbilical cord.

259 View of the trunk, abdomen, and their various organs.

260 Lungs and heart in a healthy state.

261 The brain, with its ramifications and spinal column.

262 The trachea, kidneys, liver, spleen, etc.

263 to 265 Four and two months' feetus, and tongue magnified.

266 Midwifery case, showing natural labor.

267 Eruptions of the skin, the result of poor blood, which, in this case, arose from the debashing habit of masturbation.

268 A tongue, showing effects of the injudicious use of mer cury.

269 Affection of the eye; result of self-abuse.

270 Affection of the eye; result of mercury.

271 Penis, bladder and prostate gland.272 Magnificent dissection of the leg.

273 Much-admired midwifery case, showing the head presentation.

274 Anatomical shadows.

275 Magnificent back view of a female; one of Aristotle's subjects.

276 to 278 The uvula, dissection of the throat, etc.

279 Eruption of the stomach, result of syphilis.

280 Upper dissection of the female.

281 Back view of the trunk and abdomen, with their various organs.

282 Fœtus in the womb and uterus.

283 The male testicle in a healthy state.

284 The male testicle in an unhealthy state, the resuls of Onanism. It is beginning to decay, hence its ropy appearance.

285 Effects of mercury.

286 Ague vulgaris.

287 Melanapthia et leugopathia.

288 Splendid view of the male.

289 Lupus exedens serpiginosus.

290 Chioasma, liver spot. and appeared publications and

291 Psoriasis cyrata syphilitica.

292 to 304 Magnificent colored engravings, representing the effects of self-inflicted diseases.

305 Beautiful midwifery case, showing delivery by the forceps.

306 Hydrocele, or water in the testicles.

307 Scrofula, or king's evil in the breast.

308 Secondary symptoms in the female.

309 to 312 Uterus of first, third, sixth, and ninth month of pregnancy.

313 Scorbutic, or skin eruptions.

314 Prolapsus uteri, or bearing down of the womb.

315 A bandage, or suspensory, used in many of the above cases with great success.

316 Dissection of the kidney.

317 Side view of the same.

318 Thorax, heart, luugs and liver.

319 to 320 Tongue, uvula, and back view of kidney.

321 to 327 Fine dissection of fœtus.

328 Wonderful phenomenon. A child born with two heads, four arms, and four legs; this has been pronounced by all to be an exciting and unparalleled case

329 Very fine specimen of uterus, etc.

330 Front dissection of chest.

331 Back dissection of chest.

332 to 340 Spermatozoa of a man, in a healthy state.

341 to 346 Scorbutic affections.

347 to 351 Internal dissections af the fœtus.

352 to 359 Dissections of the kidney, etc.

360 Thirty days' feetus in the womb; this is a very fine specimen.

361 to 364 Twenty-oue days' feetus in the womb.

365 to 368 Womb in different positions.

369 Uteri and fallopian tubes.

370 to 374 Showing conception in womb.

375 to 380 Mouth of the womb.

381 to 388 Microscopic Views.

389 to 394 Internal specimens.

395 to 399 Internal specimens.

400 to 404 Interesting conceptions.

405 to 412 Interesting dissections.

413 to 415 Interesting conceptions.

416 Dissection of the generative organs, showing their ramifications.

417 to 419 inward dissection.

420 to 425 Scrofulitic affections.

426 to 431 Scrofulitic affections.

432 to 436 Cancer of the nose, etc.

437 to 441 Cancer of the back, face and thighs, etc.

442 The operation of circumcision as adopted amongst the Jews. This operation consists in removing by excision the skin of the prepuce. It is usually performed about the eighth day. Many imagine that phymosis and paraphymosis are entirely avoided by the operation, but such is not the fact, inasmuch as we have met with it in our private practice several times amongst members of the Jewish persuasion.

443 to 445 Uterus, back and front view.

446 to 448 Fœtus in uteri, and sections of same

449 Diaphragm and bladder of the sheep.

450 to 452 Malformations of the uterus.

453 Cancer of the lip and forehead, in a negro.

454 Singular case of scrofula in the knee of a negro.

455 Midwifery case, showing the hand presentation.

456 Beautiful midwifery case.

457 to 458 Magnificent muscular dissections. Moone time the property of the celebrated Dr. John Hunter, of London.

459 The world-renowned dissectable female figure. In this magnificent work of art and science, we dispense with the use of the dissecting-room, as at one glance one thousand seven hundred parts of the human body can be seen. It has been pronounced by the highest medical authorities to be the most elaborate figure in the world. Thousands have gazed on it with wonder and delight.

460 Curvature of the spine.

- 461 Brain and spinal column. John to follow to follows out was
- 462 Magnificently developed fœtus.
- 463 Magnificent life-size child. "The sins of the father shall be visited upon the children, even unto the third and fourth generations."
  - 464 Splendid representation of the Venus de Medici.
  - 465 Hebe
  - 467 Apollo.
  - 468 Psyche.
  - 469 Sabrina.
- 470 Martha Jones, who lived to the great age of 115. She always begged for her livelihood, and was a well-known character in Liverpool. When she died, which was in May, 1855, to the surprisc of all, she had accumulated \$30,000.
- 471 Head of a child born in Manchester, who was visited by thousands during the time the proprietors were its guardians. It lived to the age of four years, and strange to say, during that period enjoyed good health.
  - 472 Very fine dissection of the head.
- 473 Fine, healthy child. The difference between healthy and unhealthy offspring is shown as very striking.
  - 474 Internal dissection of a cow.
  - 475 Beautiful developement of a child.
  - 476 A child who was still-born.
  - 477 Washington.
  - 478 Milton.
  - 479 Shakspeare.
  - 480 Franklin.
- 481 Skeleton of a three months' embryo. This is a subject but rarely met with; in fact, it is the only one in America, and was presented to the proprietors by the celebrated Dr. Dickens of London.
- 482 Great freak of nature, a child born with two heads; it lived only seven hours.
  - 483 The female organs of generation, in health, quite perfect.
- 484 Hermaphrodite. This person was a Russian, and used to be the door-keeper to our establishment in London.
  - 485 Virginity of the negro female.
- 486 The heart, which consists of four cavities, two auricles, and two ventricles. The auricles are separated from each other by a partition called septem auriculorum. The right auricle is situated between the two vena cava, the blood of which it receives and transmits to the right ventricle, from thence to the lungs.

- 487 The trachea or windpipe. This is a hollow cylindrical tube, extending from the crycoid cartilage of the larynx to a level with the third dorsal vertebra. It consists of from eighteen to twenty fibrocartilaginous rings, contorted behind, and connected to each other by elastic bands. Opposite the third dorsal vertebra it divides into the right and left bronchial tubes. The right bronchus is larger than the left and runs transversely into the root of the lung, and divides into three branches. On the left side of the bronchus passes through the arch of the aorta to the root of the left lung, and divides into two branches. -
  - 488 Erysipelas. This foot was amputated at the City Hospital.
- Very fine specimens of stomach-worms expelled from a 489 gentleman in Hoboken.
- 490 Very fine specimens of stomach-worms expelled from a gentleman ten years ago.
- 491 Morbid urine, result of self-abuse, in a secondary stage. This case was successfully treated by the Proprietors.
  - Much-admired feetus of three months.
- Removal of the placenta, or after-birth. Showing the surgeon's hand introduced for that purpose.
  - 494 Stomach-worms, very old and perfect.
  - 495 Tape-worms expelled from Mr. — Walker street, N. Y.
  - 496 Front dissection, showing the whole internal organization.
  - 497 Stomach-worm. 498
  - Stomach-worm. 499
  - Stomach-worm.
  - 500 Stomach-worm. Tabes Mentes.
- 501 Tape-worm expelled from a little girl ten years old, in Brunswick.
  - 502 Skull of a child nine months old.
  - 503 Urine of case No. 674.
- Very magnificent dissection of the face, showing all the principal arteries and nerves.
  - 505 to 515 Splendid specimens of the coral-rock.
- 516 The great and world-renowned Gertu, imported from Vienna, by the proprietors, at a cost of \$15,000. This has been pronounced by the many thousands who have seen it to be the very "Ne Plus Ultra" of feminine beauty, the development of all the organs are magnificent, and being life-size it is more than worthy of admiration.
  - 517 Dancing girl.
  - 518 Fish girl.
- Magnificent specimen of a healthy child, showing what may be expected from the good and moral life of the parents.
  - 520 Night. 521 Morning.

- 522 A finely developed child, but unfortunately born with scrofula, or king's evil.
  - 523 Very fine dissection of the penis and bladder.
  - 524 Preserved bladder of a horse.
  - 525 Brain and spinal column of a child thirteen years old.
  - 526 Brain of an adult.
  - 527 Skull of a child six months old.
  - 528 Healthy genital organs of the male.
  - 529 Greek bathing-woman.
  - 530 Skull of a child found in Chestnut street, Philadelphia.
  - 531 Brain of the lion Grafing.
  - 532 Very fine dissection of the foot.
  - 533 Eve and the apple.
  - 534 to 536 Brains of children, two, four, and six months.
  - 537 Perfect fœtus of four months.
  - 538 Perfect fœtus of six months.
- 539 A peculiarly developed specimen, supposed to bear a great resemblance to Ruchiey the Great.
  - 540 Very fine sea-fan presented to the proprietors.
- 541 Monster child born in Bleecker street; was exhibited in Broadway for twelve months; it lived fourteen months.
  - 542 Diaphragm of an animal unknown.
  - 543 Leda.
- 544 Half-dissection of the penis and bladder of a victim of selfabuse, showing the genital organs not fully developed.
- 545 Wonderfully preserved chicken with four legs and three wings This is very worthy of attention.
  - 546 Surprisingly perfect fœtus of two months.
- 547 to 610 Very extensive collection of tape and stomachworms; forming of themselves quite a curiosity.
  - 611 Preserved specimen of the castor-nut.
  - 612 Spine of a young shark caught at Fulton Ferry.
  - 613 to 618 Really much-admired specimen of the male; life-size.
  - 619 Sir Walter Scott.
  - 620 Aurora.
  - 621 Preserved specimen of the web-tree.

#### SEPULCHRE, OR PATHOLOGICAL ROOM.

For the Reference and Use of Medical Gentlemen and Students only.

"The wages of Sin is Death."

622 to 651 Splendid diagrams, showing the effects of self-inflicted diseases. "To the pure all things are pure."

652 to 665 Representations of syphilis, mercurial taints, injudicious and improper treatment, neglect, etc. "The knowledge of disease is half its cure."

666 Phymosis and bubo, the effects of a gonorrhea, improperly treated.

667 Spine of an ostrich.

668 Model, showing a very severe case of paraphymosis.

669 A young man's genital organs, aged twenty-one years, a patient of Drs. Jordan & Beck, who confessed that he had practised the detestible habit of self-abuse for several years. The testicles are laid open to show the right one destroyed.

"With scalding tears misguided youth bewails His youthful passions as his vigor fails, And desperate thoughts oppress his frenzied brain, Freeze his young blood, and chill his weakened frame."

- 670 Ulceration of the prepuce and glans, eating into the body of the penis, with syphilitic eruptions on the abdomen. This case came under our notice in European practice, and was treated successfully.
- 671 Destruction of the scrotum in a man who died from its effects.
- 672 This model from nature, excellently portrays the abominable and disgusting results of unqualified treatment by Quacks.
  - 673 Aggravated case of gonorrhea, or clap.
- 674 Elongation of the left testicle; the result of self-abuse and nightly emissions. Drs. Jordan & Beck think it only just to themselves to say that they succeeded in completing curing this man.
  - 675 Chancres and irritation of the scrotum.
- 676 Gonorrhea and swelled testicle; the latter, in many instances, is produced from too much exercise, the use of injections, etc.
  - 677 Gonorrhea or clap in the female.
  - 678 Chancres on the vulva of the female.
- 679 Venereal warts on the penis. Large warts are best removed by ligature, or nipped off with scissors; they may also be destroyed with nitrate of silver or caustic, potash, etc. This case was under the proprietors' treatment.
- 680 Syphilis in its most naked form, completely destroying the nose (taken after death). The lower part of the body, in this case, was one mass of sloughing ulcers.
  - 681 Veneral affection in the female negro.

682 Veneral affection in the female negro.

683 Syphilitic eruptions on a Spanish captain, who had been twelve months on his voyage without proper medical treatment.

684 Syphilitic ulcers and couptions taken from a young woman thirty years of age, who had foolishly strayed from the paths of virtue, while cook to a gentleman's family in England; she was perfectly restored by Drs. Jordan & Beck's method of treatment.

685 The genital organs of an unfortunate victim of self-abuse. It will be seen that the testicles are small and wasted, being no larger than a childs. This case occurred in Boston, but after a

course of treatment the organs were developed.

686 Gangrene of the penis. Gangrene is always to be considered the worst termination of inflammation. The circumstances, to give a favorable prognosis, would be a strong constitution, with youth, the system not much affected, slight irritation, strong pulse, the diseased parts being disposed to separate from the sound, indicated by an elevated white mark surrounding them.

"We think our fathers fools, so wise we grow: Our wiser sons, no doubt, will think us so."

687 Gonorrhea and phymosis, the effects of improper treatment and neglect.

688 Gonorrhea and swelling of the vulva in a female.

689 Ulceration of the tongue, the consequence of improper and pernicious use of mercury.

690 Syphilis in a most malignant form, completely destroying

the eyes, and eating through portions of the face.

691 Elongated testicles, the result of masturbation; to use the patient's own language, they felt ropy and cordy, with an occasional dull pain which sometimes extended as far as the anus.

692 Secondary symptoms (syphilis) in a mulatto girl, who died from its effects, after her arrival at Liverpool from the West-Indies.

693 Primary symptoms of self-abuse.

- 694 Chancres on the thighs of the female. 695 Chancres near the anus of the female.
- 696 Chancres on the glans penis.
  - 697 Chancre and gonorrhea.
- 698 Head of a young man aged twenty-one, who died from consumption, brought on by that body and soul-consuming habit, self-abuse. It is admitted by the highest authority, that this vice has killed more of its victims than any other, (even of a venereal nature.)
  - 699 Gonorrhea in the female.
- 700 Model, showing the sexual parts, intended to show the ruinous and suicidal nature of self-pollution. It is hoped these models will serve as a beacon to some, and a warning of the fearful danger of this treacherous practice.
- 701 The ruinous effects of mercury injudiciously used. This case was brought to our notice in its present state, and we are happy we were instrumental in restoring the unfortunate creature to health and manly vigor.

702 Fœtus of 5 months.

703 Fœtus of 6 months.

704 Cast of Fossil remains of an extinct animal found 100 miles north of Moscow in Russia: the only one of the species ever found.

705 Jaw of full grown Shark.

706 Skull of Horse formerly ridden by the Duke of Wellington.

707 Preparation showing the arterial, venous, and nervous formations.

708 Preserved tumor of the finger.

709 Feetal Liver.

710 Fætal Foot.

711 Fœtal arm and hand.

712 Fœtus of 5 months.

713 Leg bone of horse.

714 Syphilitic ulcers of the foot, showing also varicose veins.

715 Chancre in its worst form.

716 Secondary syphilis and Ophthalmia, accompanied by complete loss of sight, having been improperly treated by mercury and other injudicious remedies.

717 Section of thigh and abdominal cavity, showing the muscles and bones, with their covering of adipose and cuticle.

718 Spine of horse.

719 Child at the full stage of gestation, showing the natural integuments while in the uterus, with the latter organ, &c. The mother and child both died during the passage of the latter from the womb.

720 Ovaries of the female.

721 Thumb of Officer in the S. C. Army.

722 Finger of Lord C-, of England, shot off by the bursting of a pistol.

723 Fœtus of 6 weeks.

724 Fœtus of 9 months.

725 Fœtus of 6 months.

756 Fœtus of 4 months.

727 Fœtus of 3 months.

728 Various forms of yphilitic ophthalmia.

729 Full grown fœtus.

730 7 months fœtus.

731 Taenia or tape worm.

732 Disease of the uterus.

733 734 Bone of Arabian Camel. Disease of the Eye. 736 Tumor. 737 Fœtus of 9 months. Splendid collection of Snakes. 738 Monstrosity, a pig having the characteristics of the elephant 739 Singular specimen of Fish. 740 741 Dissection of Ueterus. 742 Disease of the Eye. Disease of the Eye. Heart and Lungs of a consumptive subject. 743 744 Bone of Camel. 745 Bone of Camel. Syphilis improperly treated with mercury. 746 747 Syphilis ulcus. Fœtus of 8 months. 748 Fœtus of 6 months. 749 Specimens of Uterus. Thould bus sevien 750 Fœtus of 8 months. 751 Fœtus of 4 months. 752 Disease of the Eye. 753 754 Part of the spine of Camel. Fœtus of 8 months. 755 Fœtus of 2 months with umbilicus and placenta. 756 Pup of Dr Kane's favorite dog Jenny, presented by him to Brother Samuel Beck, M. D. Of the others of the same litter, three were made into soup for their Canine Mother, while the fourth was cooked and eaten by Dr. Kane. To not always to wait land 758 Fœtus. Bone of Camel. 759 Disease of the Eve. 760 Neurology of head, foot and leg. " " " 761 762 — 765 Bones of Camel. The rest of the second to record the 766 Disease of the Eye. Fœtus of 9 months. 767 Cast, showing arteries of the head. 768 Pubic bones of Camel. 769 Stomach worms. 770 771 Prawns.

#### LECTURES TAKE PLACE DAILY.

Those by Drs. Jordan & Beck are mostly upon the subjects with which their names have become so eminent, such as

The Functions and Derangements of the Generative Organs.

WITH THE TRUE SYSTEM OF TREATMENT IN THESE CASES;

# REPRODUCTION, MARRIAGE,

THE WAY TO PRESERVE HEALTH AND CHASTITY;

#### THE BRAIN AND NERVOUS SYSTEM,

With the means of Restoring the Force of the Nervous Fluid.

THAT VITAL PRINCIPLE WHICH GOVERNS and REGULATES all the OTHER FUNCTIONS.

In addition to the above important subjects, a scientific Professor is in attendance who is prepared to furnish information on the various branches of science illustrated in the institution. This will be further facilitated by LECTURES on the

#### EYE, EAR, AND OTHER ORGANS OF SENSE,

WITH THE

#### Protection and Treatment of the Teeth,

AS WELL AS THE

STRUCTURE AND ARRANGEMENT OF THE HUMAN BODY,

In connection with the Bones and Muscles.

#### DIET AND DIETETICS

Will also be particularly treated on and explained. Any further information on any other subject that may be required will be freely given to the visitors.

#### NOTICE!

### DRS. JORDAN & BECK

May be consulted at their Permanent Residence,

#### No. 40 Bond Street,

DAILY FROM 10 A. M. TILL 2, AND 5 TO 8 P. M.

These pages are appended for the information of those whe require confidential medical advice. Such are invited to consult Drs. Jordan & Beck, who are members of the Royal College of Surgeons, London, Doctors of Medicine, Edinburgh, and have devoted their lives to the study and best method of treating such cases. It is therefore only reasonable to regard them as the most proper persons in whom to place confidence in matters relating to that branch of Medical Science to which they have paid such great attention.

#### CORRESPONDENCE CONDUCTED.

Those who desire our advice, and are precluded by distance from consulting us personally, may do so by Letter, stating age and condition of life, way of living, habits, and a full detail of the symptoms. All this should be done without reserve, to enable us to form a correct judgement of the case. No delicacy or fear of stating everything fully need be entertained, as all letters are returned or destroyed when read, and only such memoranda kept as to enable us to treat cases till cured; the most diffident, therefore, may apply to us with confidence. The letter must, in every instance, contain \$5, consultation fee, which will insure our careful attention.

#### PARCELS TO THE COUNTRY

Are packed in boxes, secured from breakage or detection, and can be addressed to be left at any Railway Station, Hotel, or other place, TILL CALLED FOR.

#### LETTERS.

Patients can have letters from us addressed to the Post-Office till called for, or in any other manner they may direct.

HOURS FOR PERSONAL CONSULTATION.

Daily from 10 A. M. till 2, and 5 to 8 P. M.

No. 40 BOND STREET.

#### DRS. JORDAN & BECK'S

### MEDICAL WORKS.

ON THE

#### **FUNCTIONS AND DISORDERS**

OF THE

# NERVOUS SYSTEM AND REPRODUCTIVE ORGANS,

108 pages, 12mo, neatly bound, illustrated by cases, giving particulars of the latest discoveries in the treatment and "Self-Cure" of the diseases and impediments of the Nervous and Sexusl Functions; post free for Twenty-five Cents.

The following PUBLISHED LECTURES may also be had by Post:

#### NERVOUS DEBILITY.

(In most cases the result of early errors,) Loss of Memory, Dimness of Sight, Want of Strength and Energy, and general incapacity—addressed to the old, the young, the grave and the gay.

# MARRIAGE; ITS OBLIGATIONS AND IMPEDIMENTS:

Addressed to those who contemplate marriage, and to the married who desire true health and happiness.

### DISEASES

### CONTRACTED IN AN UNGUARDED MOMENT,

And other ills inflicted upon mankind by the Social Evil:—how such unpleasant diseases may be effectually cured, without the use of mercury, injury to the constitution, or the fear of Secondary Symptoms.

A DDRESS

#### DRS. JORDAN & BECK,

No. 40 Bond Street, New-York,

WHERE THEY MAY BE CONSULTED DAILY,

From 10 A. M. till 2, and 5 till 8P. M.

On any of those cases treated of in their Lectures, as above. They having devoted their lives to the study and best method of treating such cases, it is only reasonable to regard them as the most proper persons in whom to place confidence in matters relating to that branch of medical science to which they have paid such great attention.
