A CRITICAL REVISION
 OF THE
 ENCYCLOPEDIA
 OF
 PURE MATERIA MEDICA.

By ^{imothy} T. F. ALLEN, M.D.

In prosecuting this revision, Hahnemann's contributions have been examined first.

The method adopted for volume one, of preparing the *Encyclopedia* for the press, proved defective, and many omissions have been found in that volume which were guarded against subsequently. In the preparation of *Belladonna* we endeavored to condense by omitting related symptoms; at the time this was done we felt justified by the vast accumulation of toxicological effects. We now perceive that some important matter has been lost: this we give in full, thus restoring the completeness of Hahnemann's pathogenesis. No other drug was subjected to such a pruning. While the late Dr. Dunham was able to work he revised every line of the translations; this included *Lycopodium*. After that Dr. von Musits, of this city, assisted, so that every translation was subjected to two or three revisions. Yet errors are numerous; but they will be found to diminish in number as the work progresses, except now and then, curiously enough, a page will be found bristling with them, while many pages will be found entirely free.

This work of revision cannot be hurried; line by line the translation must be compared with the original, and some months will necessarily elapse ere the next instalment will be ready for the press. When the *Encyclopedia* shall have been revised the *Index* will be corrected.
