PHYSIOLOGICAL LAW

GOVERNING THE

Production

of the Human Sex

BY

W. ELLIS BRADFORD, M. D.,

DIX, ILLS.

1889.

Entered according to Act of Congress, in the year 1889, by
W. ELLIS BRADFORD, in the office of the Librarian of Congress,
at Washington.

P R E F A C E .

THE object of this little monograph is to instruct or impart to the human race the physiological law governing the production of the male or female sex at will (or as the parties may desire); believing that if the sex were nearer equal mankind would be bettered, homes be happier, crime be diminished, our almshouses, asylums, prisons, etc., in a great measure be depopulated, and the world at large be wiser, happier and contented.

That there is such a law, no one can or will attempt to deny; for everything in Nature goes to prove to the sane man or woman that there is a law governing the least as well as the greatest thing that exists, animate or inanimate, in the heavens or on the earth; and that law is God's — Nature's. Nothing in this world comes by chance, but by a fixed, unchangeable law of our Creator; in every instance, when that law is complied with, producing its own kind.

And all that man has to do is to be governed by the law of our Creator, and the desired sex will be pro-

duced in all and in every instance. It can not be otherwise, because it is Nature's law -- God's law; His laws are positive, fixed, and can not be changed by man.

That I have discovered and know the law whereby the male or female sex may be produced as parties may desire, I know from verifying it in my practice for the last nineteen years. I have instructed parties who had several children in their families, all of one sex, and never had one of the opposite sex; and by complying with the instructions or law I gave them, the desired sex was the result in every instance.

Hoping that the world may not denounce me and the object of this little work without investigation, to those seeking for truth and *raising families — none others* — is this little monograph *specially* dedicated.

W. ELLIS BRADFORD, M. D.

Dix, Illinois, 1889.

PHYSIOLOGICAL LAW.

EVERY living being is brought into life under a certain law. A seed may be kept in a dry place for a number of years without any apparent change; but if a certain amount of dampness and heat is supplied, the seed at once begins to germinate.

The same may be said of man. At a certain age—that is, of puberty—he is capable of propagating his species. So it is of woman. At the age of puberty she is capable of

yielding fruit of her own kind, if the law of Nature is adhered to; otherwise not.

At the age of from twelve to fourteen in some, and from fourteen to sixteen in others, the catamenia is established. At that time *two or more ovules* ripen in the ovary or ovaries, one of which is a *female* egg or ovule; the other a *male* ovule. The menses or catamenia occur every twenty-eight days in a healthy female. The *first* one of the eggs or ovules that passes is a *female*; the *last* ones are *male*. From that fact, which I have demonstrated beyond a doubt, the following law is adduced, viz:

PHYSIOLOGICAL LAW.

First. If man has sexual intercourse with a woman at the beginning or during the *first* half of the flow of the catamenia, and she becomes pregnant, the child will be a female.

Second. If man has sexual intercourse with a woman at the *close* or during the *latter half* of her catamenial term, if she becomes pregnant therefrom, the *child* will be a *male*.

THE END.
