BE CAREFUL TO SPECIFY McKESSON & ROBBINS'.

Gelatin-Coated Pills

MANUFACTURED BY

McKESSON & ROBBINS,

Trunks and Machinery Forward.

We request Physicians to specify McKESSON & ROBBINS' on their prescriptions.

We are continually sending direct orders to recommendations of our Gelatin-Coated Pills, from our correspondents, of which the following is a sample:

"Dear Doctor: I have used some of your Gelatin-Coated Compound (Cathartic, Phosphoric and Quinine Pills, which I purchased of you when last in New York, and are very much pleased, finding them very soluble and prompt and efficient in their action. Please send me, 1-"

"SOURMOUTH."—During a session of a Tennessee County Medical Society this winter, a discussion on sugar-coated Pills was introduced, and several eminent practitioners expressed their want of faith in the solubility of sugar-coated and unsprayed pills, on account of not producing ready effect after administration, and stated that under personal observation they had known the sugar-coated pills to pass through the bowels undissolved. Some of these gentlemen had used our Gelatin-Coated Pills and during similar trials experienced and always found them to produce the most prompt and positive action.

"PNEUMONIC PILLS"—A prominent physician of Ohio lately showed one of our representatives some of McKesson & Robbins' 1-18 gr. Phosphoric Pills, which he had purchased nearly two years before, and had traced through the fourth tablet of the time during the Pills with him. Upon opening one of them open they found the phosphoric washed on the surface it was like as perfectly soluble with the Gelatin.

The Gelatin we use not being porous, all metallic poisons, as well as acids like the Sulfate and Proto-Carbonate of Iron, are actively protected by our Gelatin-Coated Pills.

"QUININE PILLS"—A well-known and eminent physician of Ohio related to us the following case: He had been in the habit of prescribing the S. C. Quinine Pills for malarial fevers, though by experience, he doubted their reliability. Having seen and tried McKesson & Robbins' Gelatin-Coated Pills, he was pleased with their ready solubility and the careful manner in which they are prepared, and prescribed some of our Quinine Pills for a patient, for whom he had previously prescribed the Sugar-Coated; the next day the patient hastened to the Doctor and, in a very agitated manner, asserted that some mistake must have been made by the druggist in putting up these Quinine Pills, complaining that they had acted in a manner that he had never experienced with the Sugar-Coated Pills. His excited manner caused much concern to the Doctor's mind, who inquired as to what action he had observed. He stated that shortly after taking he had experienced a fearful burning sensation in his ears, and that these symptoms followed each dose of the pills. The physician laughed heartily and told the patient to continue taking these pills, according to his directions, as he preferred having his patients' ears burn after taking Quinine, and ever since the physician has used McKesson & Robbins' Gelatin-Coated Pills exclusively, and maintains all remedies in this form that he can with confidence.

Quality will always be maintained, all ingredients and preparations, which we use and manufacture, being carefully tested by a competent analytical chemist, employed by us for this purpose.

The solubility of every of the granules of Morphine, Nuxvomica, Camomile, Sulfonate, and other important poisonous substances, having been the source of much concern to physicians and danger to their patients, we would state that we have, in our laboratory, a system of about 100 and containing the weight of all poisons used, and registering in a book, kept for that purpose, with the names of various beings a competent person and operator. Our machines for dividing the substances are so carefully and correctly constructed, as to divide an eraser, in even the smallest granules, never before arrived at in this class of preparations, and this practice applies as well to the larger pills. We can, therefore, afford assurance to the physician of small weight and pocket dosing. We call attention to the small size of our gelatin-coated granules, less accident being thereby required.

Yours, respectfully,

McKESSON & ROBBINS.

Please be careful to specify McKesson & Robbins' and see that they are furnished, and avoid imitations.

LACTOPEPTINE.

The **LACTOPEPTINE** is now more than any other preparation of Pepsin in the market, as it has the important advantage of dissolving all albumen and is assimilated, while Pepsin acts only upon albumen food.

It has been used for some time in the hands of the Medical Profession, for the relief of the various ailments which have been most thoroughly established in the case of dyspepsia, indigestion of children, Chronic Gastritis, Catarrh of the Stomach, Vomiting in Pregnancy or Dyspepsia, and all diseases which require the assistance of Pepsin.

One of the most important applications of **LACTOPEPTINE** is in those cases where the digestive system is weak, from indigestion, or injury from assimilation of the food. In such cases combine it with the remedy indicated.

LACTOPEPTINE, as well as all other preparations of our manufacturers, is prepared in accordance with the Medical Profession, and is kept essentially in water basis.

To Test the Digestive Power of Lactopeptine in Comparison with any Preparation of Pepsin is the Method:

Take one drachm of water add one drachm of Lactopeptine, half drachm of Hydrochloric Acid, to one ounce of Albumen, allowing it to remain from ten to six hours at a temperature of 100 deg. - separating it immediately.

- 1st.—It will digest from three to four times more inspissated albumen than any preparation of Pepsin in the market.
- 2d.—It will emulsify and prepare for assimilation the oily and fatty portions of food, Pepsin having no action upon the important alimentary articles.
- 3d.—It will change the starchy portions of vegetable food into the assimilable form of Glucose.
- 4th.—It contains the natural acids secreted by the stomach (Lactic and Hydrochloric), without which Pepsin and Fermentation will not change the character of rough-baked starchy.
- 5th.—Experiments will readily show that the digestive power of the ingredients of Lactopeptine, when two or more are combined, is much greater than when separated. Thus, 4 grs. of Pepsin and 4 grs. of Fermentation mixed, will dissolve one-third more albumen than the combined digestive power of each agent separately in same length of time.
- 6th.—It is **FOUR TIMES AS EFFECTIVE TO PEPSINE**. It dissolves nearly four times as much inspissated albumen as Pepsin, besides digesting all other food taken by the human stomach. As more of Lactopeptine is dissolved, fully equal in digestive power to even masses of Pepsin, yet it is furnished at about the same price.

LACTOPEPTINE and most of our leading preparations can be obtained from the principal Druggists of the United States.

SUGAR COATED PILLS, TABLETS AND POWDERS CAN BE SHIPPED ANY BY MAIL.

Preparations of Lactopeptine by mail.

One ounce sent by mail, prepaid, on receipt of \$1.00.

1/2 oz.
50 cts.

A fraction of an ounce or pound sent by mail on receipt of corresponding price.

We guarantee all goods of our manufacturers.

In ordering, please specify R. & C.'s manufacture.

Sent by **PERCEE LAMBERT, DOSE BOOKS AND DISCOUSES**.

LACTOPEPTINE.

The most important Remedial Agent ever presented to the Medical Profession for all Diseases arising from Imperfect Nutrition.

LACTOPEPTINE contains all the agents of digestion that act upon food, from mastication to the absorption into blood.

FORMULA OF LACTOPEPTINE.

Sugar of Milk,	20 Ounces.	Fig. Pepsin or Diastase, 3 Drachms.	
Pepsin,	4 "	Lactic Acid,	½ R. Drachms.
Pancreatin,	2 "	Hydrochloric Acid, ½ R. "	

POWDER AND MIX.

REPORT OF THE CHEMICAL ANALYSIS MADE BY PROFESSOR H. C. BARTLETT, Ph. D., F. C. S.

Laboratory, 7, South Square, Gray's Inn, London, W. C.

22nd February, 1876.

I have examined with great care the sample of LACTOPEPTINE submitted to me, and in the investigation I have not merely tested the various digestive principles of which it is composed, but have made the most careful estimate of the accuracy of the proportions in which they should exist as aids to digestion. I have not rested satisfied with any mere chemical analysis, but have submitted the sample of LACTOPEPTINE to the practical tests of ascertaining the amount of digestion they will perform upon various kinds of food, which were artificially maintained at a temperature as nearly as possible that of the body. I have also endeavoured to ascertain their use by a great number of direct applications in cases of Dyspepsia. The result of the entire investigation may be condensed in a few words. I find that fifteen grains of LACTOPEPTINE is a sufficient quantity to digest as much hardened starchy food as would be likely to form part of any ordinary meal. With the more easily digestible Albumen, and the softer fibrous portions of solid food, the work done is equally satisfactory. The emulsifying power of LACTOPEPTINE prevents any free fat from appearing on the surface of the digested food, which prevents of a particle of undigested fat cannot be prevented by taking any of the ordinary preparations of Pepsin. The addition of Diastase is also of great value, as an indication to digest starchy foods is one which is very frequently recognizable than is generally believed. Taken in combination, therefore, the various principles contained in LACTOPEPTINE can safely be relied on to assist impaired digestion, as to enable a sufficiency of food substances to be assimilated in all cases when the natural secretions of digestive principles have been, or is so frequently the case, inadequate to accomplish this essential function of life.

The efficacy of LACTOPEPTINE appears to me, in some extent, to depend upon the dilution of the active principles by a considerable proportion of soluble substances. On this account an apparently larger dose may be prescribed, but in this diluted form its action is more evenly carried out throughout the whole of the food made in the stomach, instead of concentrating the action, or rapidly dissolving the first portion, and leaving the rest altogether undigested.

I therefore lay greater emphasis upon the result of my investigations, inasmuch as I have found, that the preparation of LACTOPEPTINE contains within itself all the principles required to promote a healthy digestion.

I am, dear sir, faithfully yours,

H. C. BARTLETT, Ph. D., F. C. S.

PROFESSIONAL OPINIONS OF LACTOPEPTINE.

The undersigned, having tested Ross & Casson's preparation of Pepsin, Pancreatin, Diastase, Lactic Acid and Hydrochloric Acid, made according to published formula, and called LACTOPEPTINE, find that in those diseases of the stomach where the above remedies are indicated, it has proven itself a desirable, useful and well adapted addition to the usual pharmaceutical preparations, and therefore recommend it to the profession.

New York, April 6th, 1875.

J. E. LEAMING, M. D.,
Attending Physician at St. Luke's
Hospital.

ALFRED L. LOOMIS, M. D.,
Professor of Pathology and Practice
of Medicine, University of the
City of New York.

J. H. TINDALL, M. D.,
Physician at St. Francis' Hospital.

Prof. Chem. and Hygiene in the Am.
Vet. College, &c., &c.

KINGS COUNTY HOSPITAL, FLOWER ST., L. I., May 15th, 1875.

DEAR SIR:—I am happy to state that I have given your samples of LACTOPEPTINE a fair trial, and I do not hesitate to speak of it in the highest terms. It is an admirable preparation and I have found it in every respect, what you claim for it. I am convinced that for the treatment of Dyspepsia there is nothing to surpass it. I have also given it when the stomach was in such an irritable condition that food would not be retained, and with very beneficial results. I can recommend it to my professional brethren as a most valuable preparation. Yours, &c.,

C. E. FRITTS, M. D., Resident Physician, Kings Co. Hospital.

INDEPENDENT ASTOR, New York, March 25th, 1875.

"I have carefully watched the effects of LACTOPEPTINE, as exhibited in this institution, for about six months, especially in the treatment of Gastritis, and it gives me pleasure to be able to say that I have found the best results from it, supplying as it does an abnormal void of nature in the secretions of the stomach."

N. KERLER MORTON, M. D.

BRANTON, Vt., March 21st, 1872.

"I desire to say that I have used LACTOPEPTINE for a year, not only on my friends, but also in my own case, and I have found it one of the most valuable aids to digestion that I have ever used."

A. T. WOODWARD, M. D.

Late Professor of Obstetrics and Diseases of Women and Children,
Yale Med. College.

FOUR SOUTHS, KANSAS, February 2, 1876.

"To-day I have heard from my patient, a case of violent vomiting in pregnancy of several months standing, and which has resisted all remedies because impregnation could prescribe. The LACTOPEPTINE has proved a charming success, she being much relieved, and in fact the vomiting has ceased."

LOUIS GRANTON, M. D.

CORCORAN, N. H., November 26th, 1871.

"After a thorough trial, I believe LACTOPEPTINE to be one of the most important of the new remedies that have been brought to the attention of physicians during the last six years. I have used it in several cases of vomiting of food from dyspepsia, and in the vomiting from pregnancy, with the best success. The relief has been immediate in every instance."

GEORGE C. BLANDELL, M. D.

Mr. MORRIS, N. Y., November 8, 1875.

"I have been using LACTOPEPTINE in my practice among children, and this is the first summer in a practice of 25 years, that I have passed without being a case of Cholera Infantum."

B. G. STEPHENS, M. D.

ELLSWORTH, ELLSWORTH Co., ME., August 26, 1875.

"The sample of LACTOPEPTINE I received, and can now give evidence that you have filled a vacancy in the Materia Medica to the perfect satisfaction of the Profession. Diseases of infants and children are my specialty. I have found a great friend in your preparation in all cases of Cholera Infantum."

G. SCHMIDT, M. D.

LOUISVILLE, ANGLAND Co., OHIO.

"I have been using LACTOPEPTINE for the past year, with most satisfactory results, and have cured many cases of Cholera Infantum, and that too after other physicians had utterly failed to relieve."

WM. H. WINT, M. D.

EMERY, EMERY Co., N. Y., June 21st, 1875.

"Accept thanks for the specimen of LACTOPEPTINE you sent last week. It is a preparation that I am certain from its composition will be very useful to me. I have used Pepsin for a few years past, which has rendered me efficient service, but your preparation contains important additional elements, which will give it a wider field of application and in a more desirable form."

E. R. CHASE, M. D.

DECAT, Vt., Sept. 6th, 1875.

"I have used the LACTOPEPTINE as prepared by you for a year and a half. In several cases where Pepsin failed me, the LACTOPEPTINE acted like a charm. I believe, from my experience, that it is more reliable than Pepsin, and will sooner or later supersede it. No physician can afford to be without it."

J. H. PECK, M. D.

SHARON'S SPRING, HARRIS Co., TEXAS, November 12, 1875.

"My wife has been suffering very much with Dyspepsia for six years. I have used Pepsin with some benefit, but nothing has ever given relief like LACTOPEPTINE."

E. O. PATTON, M. D.

CHILLICOTHE, Mo., September 4, 1874.

"I have used LACTOPEPTINE this summer with good effect in all cases of weak and imperfect digestion, especially in children during the period of dentition, Cholera Infantum, &c. I regard it, decidedly, as being the best combination containing Pepsin that I have ever used."

J. A. MUNK, M. D.

CIRCULAR.

In presenting to the profession our new price list and catalogue, we desire to return thanks for past favors and trust that we may merit a continuance of the same. Any article or Instruments not mentioned in this catalogue we will be pleased to quote price on in writing, and any new Instruments will be carefully made according to directions received from physicians or surgeons.

Pocket and Operating Cases will be made up in any combination required.

In ordering Instruments we would respectfully submit the following directions which if complied with, will insure promptness as well as correctness in filling orders.

State shipping directions whether by Freight, Express or Mail.

Orders from parties not known to us will be

sent by *Express C. O. D.* with return charges to be added if the amount is less than \$20. By remitting with the order the charges for returning money by express can be saved. If requested goods will be forwarded by mail, at the risk of the purchaser.

Remittances should be made either by Draft on New York or Post Office orders.

Claims for overcharges must be made on receipt of invoice and goods.

Orders for Instruments not mentioned in our Catalogue will be filled at lowest market prices.

Catalogue prices are subject to change without notice.

Goods after being carefully packed and shipped are at the risk of the purchaser.

J. G. Otto & Sons.

- Hypodermic Syringe, hard rubber, Leiter's patent, 2 platinum lined needles, hard rubber case . . . \$4 50
 " " " " glass cylinder, Leiter's patent, 2 platinum lined needles, hard rubber case 5 —

Lleiter's Patent Hypodermic Syringe, Hard Rubber.

The advantages these syringes possess over others, may be briefly summoned as follows:

1. The needles being lined with platinum, and nickel plated, will not corrode.

2. There are no threads and screws on the cylinder and fittings, which facilitates putting the parts together more easily. The fittings are ground conic to fit the cylinder making it air tight, and at the same time very convenient in cleaning the syringe.

A full and descriptive circular accompanies each syringe and will also be sent on application to any address.

Human Osteology.

Articulated Skeletons (male or female)	\$36 — to 50 —
Skeletons articulated according to (Beauchêne) with support of copper, pedestal of polished oak (imported to order only)	— —
Half Skeleton consisting of Skull, Spinal column, hand and foot strung on catgut. 12 Ribs, pelvis, 1 Arm, 1 Leg, scapula, sternum &c.	21 —
Disarticulated Skeleton	\$25 — to 35 —
Disarticulated Skull, in boxes divided into Compartments	14 —
Skulls, plain	6 50 to 8 —
" 1 Section (horizontal)	9 50
" 2 " (1 horizontal and 1 vertical)	12 00
" 5 " showing, nasal fossae and sinus	18 —
" 7 " " the sinus, the semicircular canals, middle and internal ear.	27 50
" disarticulated, bones mounted after Beauchêne's method, the bones of the face separate from the bones of the cranium, the maxillae separate to show the nasal fossae, the cranium tips back to facilitate the study of the base. Under glass shade from	60 —
" and cross bones (for Societies)	9 50
Internal ear showing semicircular canals, cochlea &c.	8 —
Spinal Column	8 —
Female Pelvis without ligaments	10 —
Foot strung on catgut	3 50
Hand strung on catgut	3 50
Femur	2 —

Any bone can be supplied separate.

Obstetrics.

Female Pelvis with ligaments	\$14 —
" " " " and foetal head	16 50
Foetal head	2 50
Manikin, with foetus and Placenta	\$32 — to 50 —
Female figure, 4 feet 9 inch high, Thoracic and Abdominal Cavity to be laid open, each organ can be removed and studied separately (Imported to order only)	— —
Skeleton of foetus with ligaments	12 —

Prof. Beck's Anatomical Models.

The same can be obtained separate, at the price opposite each, or in sets; material—Plaster Paris. They appear in their natural colors.

Magnified Models.

Human Heart , front part to be taken off, showing the four Chambers of the Heart, together with their respective openings and valves	\$8 —
" Eye , the upper part of the Pupil (with a microscopic illustration of the Retina) to be taken off, so as to show the Cornea, Iris, the Vitreous Body and Crystalline Lense.	6 50
" Ear , showing Membrana Tympani the Ossicles, Labyrinth, and the Cochlea, half open.	8 —
" Skin , vertical section, showing the Sudoriferous Glands, the Organism of the Hair, the Pigment Granules, and the Organs of Feeling	4 —
" Teeth , showing a section of the Left Lower Jaw, development and structure of the Teeth	4 —

Models, Natural Size.

Human Brain , 4 Models,	
Upper View	\$3 50
Under View	3 50
Vertical Section from front to back	3 50
Horizontal Section, showing the Cavities	3 50
Skull , the brain to be taken into sections	12 —
Human Head , 3 Models, with part of the neck, various sections:	
Outer View, showing the Muscles, Blood-Vessels and Nerves	6 —
Inner View, showing the muscles of the face removed, position of the Eye, the Upper & Lower Jaw	6 —
Section showing the Brain and Cavity of the Nose, Mouth, Larynx and Pharynx	6 —
" Lungs, Heart and Larynx , (Heart can be opened and both Lungs can be removed)	12 —
Lungs and Heart , 2 Models, Anterior view, the Pericardium being laid open: the anterior portion of the Left Lung is removed in order to show the Bronchial Ramifications	4 —
Lungs and Heart , Posterior View with a representation of the Bronchial Ramifications, Air-cells and Blood-vessels	4 —

Prof. Bock's Anatomical Models.*Models, Natural Size.—(Continued.)***Human Larynx, 4 Models:**

Front view, with the Hyoid Bone and Thyroid Gland. \$2 50

Back view, showing the Glottis and Ligaments 2 50

Larynx, in connection with the Tongue and Pharynx, the latter opened behind. 3 50**Mask**, mouth opened showing the vocal cords &c. (Very useful for experimenting with the laryngoscopes) 10 —**Joints, 7 Models, laid open, with Bones and Ligaments:**

Shoulder 2 50

Elbow, front view 2 —

Elbow, side view 2 —

Wrist and Hand 3 —

Hip, open 2 50

Knee open 2 50

Foot 4 —

Trunk (Torso) with the Viscera of the Thorax and Abdomen (Lungs, Liver and Stomach to be removed) 30 —

MEDICAL JOURNAL

PUBLISHED BY
WILLIAM WOOD & CO.

The Medical Record,

A WEEKLY JOURNAL OF MEDICINE AND SURGERY.

Edited by GEORGE F. SHRADE, A.M., M.D.

SUBSCRIPTION PRICE, \$5.00 A YEAR.

The Volume commences January.

This Journal, now in its eleventh volume, is published on Saturdays of each week, a larger number of strong original essays, papers, clinical notices, and reports, together with all the news of the profession, is published in all parts of our country. It is devoted to the interests of all progressive physicians, Surgeons of America, Europe, and elsewhere, as well as of the progress of Medical Science throughout the world; Original Studies on Various Topics of Anatomy, Botany, and Diseases of Man, (Microorganisms, X-ray Examinations, Dental News and Items, &c., &c.)

The Editor is pleased by a large and able staff of contributors.

This Journal is intended to be thoroughly comprehensive in its character, embracing the interests of the profession in all parts of our country. It is devoted to the interests of all progressive physicians. Its object is to present to the profession a complete record of the existing state of medical science in all its departments; and to do so in more expeditious manner than the works of the general practitioner, the review published in its columns are thoroughly practical in their character.

NEW REMEDIES,

A Monthly Trade Journal of Materia Medica, Pharmacy, and Therapeutics.

F. A. CASTLE, M.D., Editor. CHAS. RICE, Associate Editor.

SUBSCRIPTION PRICE, \$1.50 A YEAR.

THE AMERICAN JOURNAL OF OBSTETRICS

AND

Diseases of Women and Children.

Edited by PAUL F. MUNRO, M.D.

Originally consisting of 48 pages, the Journal has been enlarged to 128, making 216 pages in each volume.

The Journal is published Quarterly (January, April, July, and October), and comes with its FIFTEEN VOLUMES with the issue of April, 1905.

It is published with "Original Communications," "Departments of the New York and Massachusetts Obstetrical Societies," "Notes of Lectures pertaining to Obstetrics, Lying-in, the Puerperal State, Diseases of Women, and Diseases of Children," and a complete Review of the English and Foreign Works of value; Letters, Clinical Reports, Operations, etc., will occasionally be inserted.

The three Departments will be equally represented in each number.

SUBSCRIPTION PRICE, \$4.00 A YEAR.

To Subscribers of the Medical Record, for Four Dollars a Year.

ARCHIVES OF OPHTHALMOLOGY AND OTOLGY,

EDITED AND PUBLISHED IN ENGLISH AND GERMAN, BY

Prof. H. KNAPP, M.D.,
OF NEW YORK.

and

Prof. S. MOORE, M.D.,
OF BOSTON.

It is hoped these ARCHIVES will be published at intervals of not more than three months as possible.

SUBSCRIPTION PRICE, \$5.00 PER VOLUME.
