

NEW THEORY! *New Principles!* NEW DOCTRINES Regarding the **TREATMENT OF DISEASES.**

Can disease of any character whatever, exist without a cause? Then does Medical Science consist in becoming familiar with all such causes! Is it the lungs, liver, kidneys, blood, bile or any fluid or solid of the system, that is diseased? What are the *true symptoms* by which each respective disease may be known? Does Anatomy furnish this knowledge? It assists us in our investigations, but cannot furnish the information requisite. Far greater knowledge is necessary for physicians, and which unfortunately for the cause of suffering humanity they have not hitherto acquired. Do physicians know the chemical constituents of the fluids and the solids of the human body? They do not! Do they know the changes to which animal matter under all circumstances can be subjected? No! Do they know how morbid matter originates in the system, its character and nature when there? No! Under such circumstances, *how is it possible* for a physician to prescribe either judiciously or correctly? Must not all his prescriptions be mere experiment, hap-hazard—like a blind man groping in the dark—all uncertainty and doubt? He uses a medicine because somebody else has used it!—its *modus operandi* he is utterly ignorant of! He knows no other effect or action which medicine produces upon the system, but that which is immediately visible. If it has other actions, and they are the most deleterious, he knows nothing about them? Where is the difference between the quack and regular doctor? The quack knows his pills will act as a cathartic, and that is all the doctor knows about rhubarb, jalap, &c.

This ignorance is the *true cause* why disease is treated with so little success by medical men—why they have so many diseases—why they make a man sick to make him well—why they tear down the system to build it up again—why they doctor the constitution instead of the disease—why they treat symptoms instead of the primary disease—why they try one medicine and then another, and another, with little good effect—why many of those medicines produce good or evil effects which they did not expect or intend—and why they deem so many diseases incurable.

The more fully to illustrate and explain these doctrines and principles

Dr. J. C. KELLEY,

Of New-York, will deliver a

MEDICAL LECTURE,

At the

fourth Baptist Church

On Thursday & Friday evenings 8 & 9th insts.

At half-past seven o'clock.

☞ Ladies and Gentlemen are invited to attend. ☞

ADMISSION FREE.
