Dear Josh,

Many thanks for sending the new material for my "Readings in Heredity & Development". Have done the cutting and pasting and now the revised material is on its way to Oxford University Press.

I followed all of your suggestions except:

I did not remove the major portion of the first paragraph of the American Nat. paper, That is a fine introduction for students -- putting things in a broad perspective.

Also, the third paragraph on that page, which you suggested be deleted, is being kept. That also is very useful for students.

Of course, if you really do want them removed, it will be done. But saving space is not that important.

One of these days I hope that you will write a Social Biology. Few have thought as deeply or as humanely about these things as you. The need is very great.

Sincerely,

John A. Moore

I have promised a date to take a class on the same subject 1968. I'm sure you'll like it very much!

is so PE! John

no, let now and then, I would be sure to add later thoughts, and maybe we could work all that out.

John
