

26.58

Prof. I. Lederberg
Dept. of Genetics
Stanford University
Stanford, California

Notice of Change of Address

Effective February 1, 1959

(c. Jan. 20 in fact)

The Genetics Department is a new division of the Medical School of Stanford University which is being consolidated in a newly constructed medical center on the Stanford campus. It will embrace fundamental research work on a variety of experimental materials including our continuing program of the genetics of bacteria.

Hi Leo

I've just run into Smith & Bridges' paper in J. Exp. Med., August issue, which you must be getting just about now. A beautiful demonstration that maintenance of tolerance (to BSA) requires ^{proliferation} (re-administration) of the antigen to rabbits. So there for stable clones! Also a very neat paper (Archives of Pathology & ^{Microbiology} ^{Immunology} ^{Aug. 58}) on use of anterior chamber of mouse eye for following ^{thymus} transplanted cells. Do what you mean about the values of this technique.

— Josh
