New York, N. Y. 10021

Dear Josh:

Great to get your note and be caught up on your personal life, which looks very attractive! I enclose a photo about 3 years old, some 2 years after my second marriage to Dr. Ken Fremont-Smith (a physician; his dad was Frank of the Macy Foundation-). He has 4 grown sons, I have 2 grown daughters and a son. None at home.

How to do particular research depends on available methods. All research depends on some kind of model and assumptions. (I must have misunderstood your statement.). The problem at the level of complexity of development and aging is to get and integrate sufficient data for a dynamic model which is so complex and realistic that it has predictive value. This is now possible.

I do not know and could not decipher (!) the last name of Nancy M--- at Yale. ✓
Would you send her this other reprint?

Thanks and best regards,

A handwritten signature in cursive script that reads "Barbara".

Barbara E. Wright, Ph. D.
