"Vitamin" assay

The NESTM for 10/12  
has an interesting article on  
inactive cobalamin analogs  
that are present in human  
serum and confuse the  
diagnosis of pernicious anemia.

Just a further complication is  
the identification of "true  
vitamin." See p. 827 for terminology.

And a candidate for a diagnostic  
reagent.

Yours,  
Josh.
