

11/14/82

ELT ↓

With the exception of Neurospora I  
(Mar 1941) which dates the  
recognition of Neurospora work  
(examined by me 11/77) there is  
not much that can be deciphered from  
these notebooks. The Drosophila books  
are mostly extraction/fractionation  
schemes for pigments; precursors, etc.

I do not know what "toxin" is about.

4 copies of a few pages copied out, encl.

J. Lederberg

see Carfed. character.
