

Personal memo from
JOSHUA LEDERBERG

David Galas
D.O.E.

JUN - 3 1993

Epi? - nucleic mechanism in
teratology.

Dear Dave -

Perhaps you've been paying closer
attention than I - but a recent review
in AR Cell. Health attracted my in-
terest.

I used to be quite skeptical about
claims of butyl lead following paternal
exposure - but smoking, chlorine
radicals. But some mechanisms are
coming to light that warrant another
look.

Starting in 2 weeks I'm going on
the NIH-Dickens's (to be) (that will be)
Adm. Committee. What's new on the
DNA-patenting front?

Any news on accelerated forgetting
of DNA-repair research?

Yours
Josh.
