MAR 8 1984

Proposal for a joint paper
on:

a critical look on what
happens to life expectancy and
age distribution in U.S. when
(not if) specific disease con-
ditions like atherosclerosis,
some cancer, ... are mitigated;
and when ^{all} infant mortality
etc. are controlled to best case
now achieved in any stratum.

What literature do you have on
that now?

Josh.

he has a
1975 paper
