Jena, June 20, 1958
Tck/Schrö

Dear Professor Lederberg,

Thank you very much for your letter of June 13.

I am very sorry that the matrices arrived in such a bad manner. I shall give you some matrices at the Stockholm congress. If you, then, find them to be of any use for you, I shall tell you all about commercial description.

In the meantime we succeeded in the production of a numbered matrix. We have now ten thousand squares (length of the edge 60 μ) with four numbers in every field. I include a microphotogramm of a microculture on agar inoculated with *Bacillus subtilis*. The slide sulture is covered by a coverslip which carries the Formvar-replica of the new matrix. This development has been done in connection with the Zeiss works.

Sincerely yours,

Hito Taubenbeck

U. TAUBENECK

Congratulations! This is very pretty. I look forward to seeing you at Stockholm.

J. Lederberg
