Via St. Louis

Dear Pita

I have your note of 7/15 & have asked one of my friends in NASA to respond.

The US Information Library in Rome would also be a good source.

If you have any more particular questions on specific aspects of space biology please let me know.

Ross Adey at UCLA is one of the leading investigators on the neurophysiological aspects of space flight.

Sincerely
John Lederberg.

LEVI-MONTALCINI
