February 25, 1957

Dear Norton

Here's a full itinerary. We'll look for you at the airport, but please don't knock yourself out. If you're not there, we'll call.

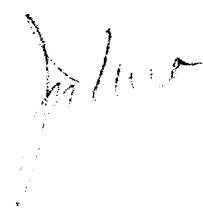

I'd written to Lloyd Law: he answered just now that he's been quite busy on the leukemia angle. So far, marrow replacement hasn't been as effective as he'd hoped. There's another syndrome, which may be due to antibody reaction against the host, after homologous transplant.

The low-penicillin-level ~~for~~ selection for wall-less mutants hasn't worked. But we've improved our general screening methods.

Connie is in something of a spot in her work twixt Vet. Sci. and Genetics. If she could organize her program more concretely, it would be very helpful to her. She's done a lot of the preliminary legwork in preparing reagents; you know the inconsistent results we've had on the O5-antigen lysogenic conversion, which might have something to do with B phages. If you could send her the ones we discussed, we'd both be very grateful. What's odd is the difference between SE 15 and 18, which differ in O5 and in an A phage! But we could not show any regular effect of lysogeny for this phage on O5 content.

See you, April Fool's

Yours
