Francis Rittell here for dedication proceedings
— I met him rather accidentally through
Mel Cohn & found he was succeeding Bill
Consolazio at NSF in Molecular Biology.
Also found he was interested in microbiology
and felt this should be better represented
in NSF programs - but he wasn't yet very
well informed. NSF still hasn't worked out
its orientation to NASA. But people like him
may help. Rittell should come back here
for Westex-4 on the 26th.
