The last issue of Amer Scientist carries an article on "color centers in crystals." Do either of you know of any data on the IR properties of irradiated crystals of common minerals (e.g. silicates)? This might be something to look out for in interpreting Sinton's results.

J.L.

P.S. ~~Write~~ Kudos for your proposal for a Peace Agency!

J.L.

If his results are due to this, why does the moon not show this? Doubt it! HLL.
