Howard--

This I realize may have to be shortened for Saturday publication, but I thought you'd be interested in the preamble (first couple of paragraphs lead-in).

( I mean to follow up soon with some comment about Nixon's side-remarks on deflecting urban concentration (see Broder's column of 1/29 (in SF Chron.) North-Californians would add a strong postscript on the redistribution of water resources at great expense and incidental ecological damage to already overcrowded areas like LA. Also keep nuclear reactors away from existing centers of high popn. density! // Don't hesitate to preempt any of this for the editorial page.)
