my article on science and politics

I would be very glad to pursue this further--  
you mentioned that you'd 'like to meet' me.  
(In fact we were on a panel together some years  
ago, sponsored by a Santa Clara County church  
group; I remember asking you if the legislature  
would ever rationalize the law on marijuana.)

The piece you read is only an introduction to  
a series (and a book) I am writing on the social  
impact of science; I would not pretend to call  
it a comprehensive statement.

Sincerely,
