Dr. Ernst Betz, Hollerallee 22, 28 Bremen, West Germany

30th July, 1971

Prof. J. Lederberg,  
Stanford University  
Stanford, Cal.

Dear Sir,

Mr. Gofman, from Lawrence Radiation Laboratory, has sent me his Testimony before the select committee on nuclear electricity Generation, Pennsylvania State Senate.

In this paper he quotes an article of yours in the Washington Post from July 19th, 1970.

We should be very grateful to you if you could send us a copy of this article or of the Testimony on which it is based or any other material concerning the effects of radiation on genetic and chromosomal disease.

We need desperately as much reliable material as possible for our fight against the erection of the "biggest nuclear power plant of the World" near our town (pop. 600.000), only twenty miles from it. We have founded an action committee against these plans, but find it difficult to get material quick enough against politicians and industry to inform people about the hazards of it.

Yours sincerely,

*Ernst Betz*
