Professor J. Lederberg
Department of Genetics
Stanford University School of
Medicine
Stanford, California 94305

Dear Prof. Lederberg:

Dr. Allan Duffield of your department has informed me that you plan to obtain additional apparatus that would provide high resolution GC/MS as a service to the Stanford community.

We have in the past used the hospitality of your department in the identification of metabolites and derivatives of phenothiazine drugs and cannabinoids by GC/MS. Originally, we had the collaboration of Dr. B. Halpern and more recently Dr. A. Duffield, who was instrumental in helping us with some of our problems.

Our department would indeed be most interested in availing ourselves of GC/MS analyses in the course of our current NIH projects which again are concerned essentially with drug metabolism and the isolation and characterization of unknown drug derivatives.

As a rough estimate, I would think that we may be interested in the analyses of about five samples per month, two of which will require high resolution MS.

I certainly hope that your project to acquire the sophisticated new instrumentation you are seeking will be successful.

Sincerely yours,

Irene S. Forrest, Ph.D.
Chief, Biochem. Research Lab.
