DEPARTMENT OF BACTERIOLOGY

January 19, 1950

Dr. Joshua Lederberg
Department of Genetics
University of Wisconsin
Madison, Wisconsin

Dear Dr. Lederberg:

if available, I would appreciate reprints of the following papers:

- ✓ Genetics, 32:505-25, 1947
 - ✗ Heredity, 2:145-98, 1948
 - ✓ Proc. Natl. Acad. Sci., 35:178-84, 1949
 - ✓ J. Biol. Chem., 165:381-82, 1946
- Ann Rev*

In your review in the Annual Review of Microbiology I hope it is the printer on page 18 who is responsible for the conversion of a non-motile Bacillus mesentericus to a motile Bacillus anthracis and not some unlucky bacteriologist. For years we have taught that typical anthrax is a non-motile organism.

Sincerely yours,

Carl Lamanna

Carl Lamanna, Ph. D.
