January 24, 1950.

Dr. Carl Lamanna,
Johns Hopkins Univ.

Dear Dr. Lamanna:

Under separate cover, you will receive reprints of all the papers still available from the list you requested.

If you are interested in the Bacillus-mesentericus-anthraxis transformation, I would appreciate any comments that you might have after reading their report. A more complete account than that in the Experientia reference cited is a paper in English "Induced Mutation on Bacillus anthracis and Bacillus mesentericus", Manninger, R. and Nogradi, A., Hungarica Acta Physiologica, I (6): 1-5. Perhaps I quoted them a bit loosely, but I could not find enough details at the time to warrant a more detailed citation.

Sincerely yours,

Joshua Lederberg
Assistant Professor of Genetics
