

October 30, 1953

Dear Werner:

I am glad to hear that you will be able to visit Madison about a month hence. In anticipation of your visit, I will arrange the lecture schedule to fit, and hope you will do us the courtesy again.

Thank you for the references. I had noted your paper on electrophoresis, and we had started considering some electrophoretic determinations on our material. Would it be possible to apply through you for a reprint of the Hartmann-Lauffer-Bateman paper of the method?

Bernstein has been going ahead with isolation of flagella of the two phases. A prepn. of phase 2 did agglutinate very nicely with acriflavine (as well, of course, as with homologous antiserum); he is in the midst of making a comparable phase 1 prepn.

During your visit to Madison, I hope you will find it convenient to spend a day or two with us. We moved recently to a house, by no means a mansion, but comfortably paid out. The lot is perhaps the most attractive feature (even sans trout stream), but will not, unfortunately, be very congenial for an outdoor seminar in November as it was in September.

Sincerely,
