PROPOSAL RATING SHEET

<u>No.</u>	<u>Title</u>	<u>Investigator</u>	<u>Institution</u>
B-3097	Bibliography & Monograph on Plant Morphogenesis	Edmund W. Sinnott	Yale U

Professor Sinnott's background and status are too well known to require comment. His health has not been excellent recently, which is doubtless another reason he may need more help to complete this task. I do not know Mrs. Reeder except as the wife of one of his colleagues on the Botany faculty.

This would seem to be as worthwhile a project as any book by an experienced investigator. (The obvious policy questions have to be left ~~the~~ to the NSF.) The book would not fill any remarkable*gap, but will undoubtedly be successful, and appreciated by other students of the subject.

(* I've not heard any spontaneous remarks that there really should be such a work, but there is no a priori doubt of its scientific value.)

Score 2
From 5 (low) to 1 (high)
