No. Title
-----------

Investigator

Stanley Zimnering

Institution

Trinity Col.

B-3147 Interchromosomal effect on crossing over & segregation in <u>Drosophila</u>

> Dr. Elemering is enother of the bright young men who are putting new life into Brosophila Genetics after an interval of relative dormancy while the fade of blochemical and microbial genetics dominated the stage. His thesis was a skillful job of cytogenetic analysis, and the proposal shows equal ingenuity in an attack on a new problem of fundamental importance. He is teaching at a smaller school with limited resources, and both he and the institution should be encouraged in research development.
