OCT 1 1976

Basic Science + World Health

one issue I hope to pursue in December is an effort to produce a vehicle for broader awareness of scientific challenges in world health (slightly broader than topics of medicine but embracing this!)

So I have been sustaining this dialogue with Noel.

More than the Food Science effort we should encourage more face-to-face confrontation of "frontline scientists" with "ivory-tower specialists"

Nevertheless the meeting that Brenner chaired was not half bad!
