Mechanism of chrom. rearrangmt

Thank you very much for  
the references. I had

messed the Lee 1974 paper

and it was right on the

button!

I once thought that inter-  
somatic cell  
specific hybrids could be used to

look for the role of repeated-seq.  
DNA in chromosomal interchange.

Have they been studied? Do the

transposons jump to heterologous

chromosomes?
