

Ed - I must have forgotten to put this in my letter to you. Just found it in my file. Sorry. Phil.
 Get your note of the mandate. Food.
 Enten and I will be travelling west this summer. All, but for a short visit only as we have to get back to Madison to move. To have you to CSH well would have wrecked our whole summer as far as getting any work done so it was again just as

July 6, 1953

Dr. H. B. Glass
 Science

 Washington 5, D.C.

Dear Bentley:

Thank you for your letter of the 1st, asking about using Ed Tatum's and my paper for Science. I have no objection at all, in principle. However, in order to avoid any misunderstanding which might arise from the very long interval between the drafting and the publication of this review, I must ask that a note to the following effect be included, either as a footnote, or an addendum:

This paper was prepared in connection with a Symposium on Sex in Microorganisms, held December 1951, and intended for publication in a forthcoming volume by the A.A.A.S. [This can be reworded as you wish].

The following work on this subject has been published subsequent to the final revision of the present manuscript:

Hayes, W. 1953 Observations on a transmissible agent determining sexual differentiation in Bacterium coli. Jour. Gen. Microbiol. 8:72-88.

Watson, J.D. and Hayes, W. 1953 Genetic exchange in Escherichia coli K12: evidence for three linkage groups. Proc. Nat. Acad. Sci. 39:416-426.

Clark, J.B. 1953 The effects of chemicals on the recombination rate in Bacterium coli. Jour. Gen. Microbiol. 8: 45-49.

Cavalli, L.L. and Maccacaro, G.A. 1952 Polygenic inheritance of drug-resistance in the bacterium Escherichia coli. Heredity 6:311-331.

Cavalli, L.L. 1952 Genetic analysis of drug-resistance. Bull. World Health Org. 6: 185-206.

Cavalli, L.L., 1953 An infective factor controlling sex compatibility in Bacterium coli. Jour. Gen. Microbiol. 8: 89-103.

Lederberg, J., and Lederberg, E.M.

I am not seeking to embarrass the journal by emphasizing the delay in publication, but I would not wish any misunderstanding to follow from our silence on some of the issues raised in the later papers. On the other hand, I am sure there are no explicit statements in the text of which we are likely to have later regrets.

Yours sincerely,

CC: E.L.T.

Joshua Lederberg
