*For name 91104*

I fully agree with Dr. Beadle's over-view, and enclose some of my own writings consistent with it.

T. Dobzhansky, in "Mankind Evolving" has written very well on this subject. For the extreme ~~xm~~ of geneticism, with which I generally do not agree, see  
Darlington, C.D. "The Evolution of Man and Society".

Most biologists would say that man is unable to evolve (biologically) fast enough to keep up with the needs of the environment his culture is so rapidly changing-- and we must, as Beadle stresses, improve our cultural devices therefor.

Sincerely,
