

Memo from
JOSHUA LEDERBERG

To: Max Delbrück

NOV 1 1971

some references

1. Viruses in fungi. See, e.g., HA Wood, Virology 44:592 1971 -- and references there to Banks, Hollings. See also Banks, Nature 8/1/70 (227:505).
2. "Reduction in dimensionality" This idea has been kicking around for decades in the context of the mechanism of chromosome synopsis -- with such phrases as "zipper effect". I can't pin down its historical origins, but suspect that E.B. Wilson covered it <1925. Or did you formulate it in 1941?

JP 212 Summary

PROFESSOR JOSHUA LEDERBERG
Department of Genetics
School of Medicine
Stanford University
Stanford, California 94305

DELBRUCK
