

June 29, 1951.

Dear Harry-

We returned from extended travels just a few days ago. The references I promised to send you are:

Pollock, M.R., 1950 Penicillinase adaptation in *B. cereus*.... Br. J. Exp. Path.,
31:739-53 (Dec.) and, less important,

Strandskov,,F.B., 1947 J. Bact. 53:555-59 (adaptation to Cl-pab). The latter I am convinced is a case of selection of resistant mutants from microcolonies on the plates containing the inhibitor.

Sincerely,

Joshua Lederberg
