Dr. J. Lederberg  
Department of Genetics  
The University of Wisconsin  
Madison 6, Wisconsin

Dear Dr. Lederberg,

In am enclosing a completed application for the American Cancer Society Fellowship for the purpose of obtaining the signature of the Chairman of the Dept. of Genetics, as called for in paragraph 31. Also I would be very much interested in your comments concerning the research program I have outlined. As you can see I am very much **interested** in a further exploration of the formaldehyde effect. The **problem** you suggested interests me as well. I do not believe that there is any dichotomy involved and that both approaches may be valuable in explaining mutations.

Would you please return the applications to me with the necessary **signature** and any comments and/or elaborations of the research program as proposed, so that I might include such suggestions in the final draft.

Sincerely,

  
Ellis Englesberg
