

February 1, 1949.

Dr. F. J. Hehre,
Department of Bacteriology,
Cornell University Medical School,
New York, N.Y.

Dear Dr. Hehre,

I would be very grateful if you could find it possible to place my name on your mailing list, and to send me your available publications on the bacterial synthesis of polysaccharides. We are engaged in genetic and enzymological studies on mutants in respect to an "amylomaltase", which is comparable to the *Neisseria amylo-* sucrose, but which is found in *Escherichia coli*.

Yours sincerely,

Joshua Lederberg,
Assistant Professor of Genetics.
