

Sept. 20, 1950;

Dear Mrs. Adler:

3K-13 is a galactose-negative; isoleucine-valineless mutant from a monophasic *S. typhi-murium* received from P.R. Edwards. It was labelled as I IV V;-;1,2,3...

SY-36 is *S. gallinarum* received from E.K. Borman as "3045".

As we are now ourselves studying lysogenicity in an *E. coli* system, I will be very pleased to hear your ultimate findings with these cultures.

Sincerely,

Joshua Lederberg  
Associate Professor of Genetics
