Sep. 9

Dear Joshua:

Would like to keep the ONPG for possible class expts. this semester, if you don't mind.

I've been busy preparing for courses, so have done no more expts this week - Martha has repeated several of the UV expts with identical results.

Incidentally, we overlooked a good possibility in the interpretation of the decline in maximal rate of adaptive cells following UV treatment. It could be a statistical phenomenon, if we assume an all-or-none effect of UV in the adaptive mechanism. If not, I don't see any good way of deciding between this and the destruction of precursor.

Best wishes to you both

Reger
