

Bacteriology Dept.
Queen's University
Kingston Aug 1, 1952.

Dear Dr. Lederberg:-

The above address is the only one which I can give you and it is good only for a few months. We are now in a subtle waiting to get a business deal completed so that we can move into a new house on August 15.

We've been so busy travelling around and house hunting that I haven't been getting much work done at the lab.

Max and I have been expecting you and Mrs. Lederberg to come by this way or your trip around the end of August. For the first few weeks in our new house we will be "camping" until we can get some furniture, but we do have beds and we can grill steaks and meat corn in the back yard.

Kingston is an interesting historic place since it was one of the first military establishments in Canada and old Fort Henry here is quite a show place. There are also daily motor launch

trips through the Thousand Islands. So plan
to stay overnight with us and see the country
around Kingston.

Please thank Larry for the maps. I am
going to send the WG 10 and WG 15 mutants.
During the fall I would also like to have
E. coli strains 58-161 and W 117 for a demonstration
of crossing - if and when it is most convenient for
you to send them.

Our regards to Phyllis, Dorothy, Larry and
the others. Please don't let this moving business
interfere with your plans if you can come to
Kingston. We're getting quite used to the moving
business and we'll do our best to look after you.
Just phone the lab 4384 or if after 5 p.m. phone
2-4311 or drop us a line.

Sincerely,

Bill Thomson.

P.S. Your letter arrived before I had posted this.
Will be glad to get the charts and hope to
see you -
Bill T.
