

July 1, 1948.

Miss Helen Kann,
Dept. Bacteriology,
Indiana University,
Bloomington.

Dear Miss Kann,

At Dr. Luria's request I am sending you the following cultures derived from K-12:

Y-10 Threonine, Leucine, Thiamin - (E-1-E₁-)
Y-87 Biotin, Methionine - (E-15-) and Lac₁-V₁^F
50-161 Simply E-K.

These cultures are referred to in detail in my paper in *Genetics*, 32:505/

Luria implied that you might have some new single mutants of K-12.

Is this the case?

Let me know if you have any difficulty in making "crosses". There should be none.

Yours sincerely,

Joshua Lederberg
Assistant Professor of Genetics.
