INSTITUTE OF RADIOBIOLOGY AND BIOPHYSICS

11/13/52

Dear Josh,

Any time you like I can come up. I agree I'd prefer not to come when Luria does as he plans to stop in Chicago on his way. I really look forward to visiting your class.

By the way I have a new technician who is very good. So good, in fact, he wants to make EMG plates. Can you tell us what kind of Eosin we should use. As I recall you said one had to be very particular about this.

We probably will have missed your call Saturday night. Jane's mother baby sits for us every Saturday night - leaving us one evening out a week.

We still can't make any sense out of the "anti-mutagen". We can talk about it when I'm at Madison.

Burnet is giving a lecture at Illinois Med School this afternoon and we're essentially closing the lab to go hear him.

Regards

Dam

David is giving regularly - has been sleeping
