4/24/53

Dear Josh,

I started running 58-161 at an input concentration of  $10 \mu\text{g/l}$  of methionine + some biotin. It was inoculated on pm of 4/22/53 and was plated 4/23/53 at dilution of  $10^4$ . ~~the~~ Density is about  $2 \times 10^6$ . I am sending you a plate from yesterday's plating as representative of the starting population.

I'll continue to send you plates from time to time as it is easier than waiting 10 plants. I'll send them about every 4 or 5 days.

~~Hope~~

Oh yes, generation time is about 2 hr.

Baran
