

THE UNIVERSITY OF CHICAGO  
CHICAGO 37 · ILLINOIS  
INSTITUTE OF RADIOBIOLOGY AND BIOPHYSICS

June 18, 1953

Dear Josh,

Jacob will arrive in Chicago on Monday. Evans (Biochemistry) has arranged for him to give a seminar on Tuesday or Wednesday. As soon as Jacob gets here I'll find out when he wants to arrive in Madison and will let you know. He's a very nice guy so take good care of him.

We missed you at CSH, both personally and scientifically. Szybald and I were behind Tatum's call. I think I sensed why you did not come and I sympathize with your position. Watson seemed a little sore and I urged him to visit you. You'll never recognize him. He only talks English.

The intelligent people at CSH feel like I do. Even if this that Hayes says is correct it is really only one detail of your story that is wrong - and even this detail seems almost semantic. We feel that your contributions have been so great as to make me somewhat angry at Watson and Hayes. I fear I can only express myself properly orally so I'll defer elaboration. There was nothing new at the Symposium. It was pretty much the usual Delbruck dominated show.

Dulbecco's polio plaques were pretty, Hershey gave a good, if cryptic, talk. Norton made the mistake of reading his ms and this made it hard to follow. There were many long, dull, and poorly presented papers by the animal virologists and an occasional bact. virologist. Bertani outdid himself - best talk I've ever heard him give.

By the way I hope we get to see you before we take-off.

Our itinerary is roughly as below.

July 23-25	Go to NYC	
July 28	Sail on Flandre	
Aug 6-23	Paris - at 92 Rue	<sup>no. Dr Robert Weill</sup> Jouffroy, Paris XVII
Aug 24-31	Bellagio (Genetics)	
Sept 1-6	Undecided	
Sept 6-12	Rome (microbiology)	
Sept 12 - ~25	Wander around Italy	
After that again in Paris at 92 Rue Jouffroy and Inst Pasteur.		

What you guys planning to do this été?

Regards to Esther
