30 April 1956

Dear Josh,

Under separate cover I am sending you the *A. tumefaciens* auxotrophs. I enclose a list describing each strain. Klein has written me several insulting letters requesting the cultures. I am tempted to tell him off but will no doubt soften and send him them.

I have had a rather interesting break in the enzyme induction expts. which explains a great deal. A few more weeks experimentation and I will have a story that you will find amusing. When will we see you again? What are your summer plans?

I had a very nice visit to the West. The duplicons got a cool reception in Berkeley, Roger being against and Germaine for. Everyone was nice to me, though.

Best regards to Esther too
