Dear Josh,

I promised to write you about our experience with cycloserine. Unhappily the concentration used (150/ml) did not give sufficient inactivation to give conclusive results. At a survival of  $\sim 10^8$  after treatment there was 1 glucose negative in  $\sim 10^8$  colonies examined.

One other thing. The anxiety about my relationship with Mel Cohn was groundless. He wrote me a very intelligent sweet letter. Things heard third hand are rarely true. I'm so pleased that all is straight as I like him very much.

No doubt you are about to leave any minute for Stockholm. Bon Voyage and Congratulations from all of us.

Qarr
