COLD SPRING HARBOR, LONG ISLAND

THE BIOLOGICAL LABORATORY

March 30, 1942

Dr. T. M. Sonneborn
Department of Zoology
Indiana University
Bloomington, Indiana

Dear Sonneborn:

My answer to your letter of February 23 has been delayed because I was waiting to hear from Thimann. His letter came today--it took him a long time to make up his mind. He cannot attend the Symposium; that answers most of the questions raised in your letter. We are very anxious to have you as a speaker, and particularly to include in your discussion the Moewus material.

Tatum is off the program, and Ephrussi will limit his discussion to eye colors. I asked Bodenstern to take lower invertebrates, primarily insects. That leaves for you a fairly wide field, and I hope that you will agree to take care of it.

Enclosed is a reprint from last year's Symposium volume, which should be used as a sample for arranging literature citations and for determining the size of figures. It is advisable to draw figures so that they can be reduced to a single or a double column width. Figures for half-tone reproduction will be accepted, and they will be printed on special paper and inserted as full-page plates. In order to reduce printing expenses, it is desirable to limit the use of half-tones to the most essential.

It is planned to reserve one or two half-days for demonstrations of various techniques used in experimental work. Dr. Riddle has offered the facilities of his laboratory to take care of the material submitted for demonstration. Please let me know if you intend to demonstrate anything.

Sincerely yours,

M. Demerec
