Dear Josh:

Enclosed you will find the latest pedigree which is rather disappointing again. I am sending along the No.'s: 23, 56, 58, cultures but I wonder whether it is really worthwhile to do so. I am going to Cincinnati and thought I had mentioned so earlier. I will bring all the records which we have accumulated so far.

~~I am going to try to double the size of the family tree by transferring one of the first two daughter cells to another moist chamber. I think it will work but have not tried it yet.~~ *Didn't work so*  
The sodium nucleate, I take it, is sodium ribonucleate. I think I will give it a fling anyway. Guess this is about all at the moment as I have not digested all of the data in your letters.

Very truly yours,

M. R. Zelle

MRZ:jc *p.s. am sending #7-159, 160, 161, 367, 368, 184, 185, 186, 187, 188*  
Enclosure *189, 190, 175 to 181 Indosine.*

*Best cultures marked "mass" are transfer of both cultures.  
Others are seeded from main colony on EMB mounted.*
