Dr. Joshua Lederberg
Department of Medical Genetics
School of Medicine
Genetics Building
The University of Wisconsin
Madison 6, Wisconsin

Dear Dr. Lederberg:

Grace Leidy and I are very pleased that you are in the process of studying the nutritional requirements of *Hemophilus*. We shipped yesterday the cultures listed below.

H. influenzae

Cascia	Sa and Ra
Santo	Sb and Rb
Ruggiero	Sc and Rc
Garf	Sd and Rd
Pell	Se and Re
Dingles	Sf and Rf

H. parainfluenzae

Fiddess
Bossarelli

H. suis #7356-8 (*H. parasuis*)

H. aegyptius

#15, #46

I suppose we have had more experience with Sd and Rd than with any other type.

In answer to your question on irregularity in the DPN

(continued)

requirement of Rd, we have not studied this in a sufficiently quantitative fashion to answer this.

We are looking forward to hearing about your results.

With kindest regards,

Yours,

Hattie Alexander
