AND IMMUNOLOGY

Josh and Esther:

Forgive me for the long hand but this is faster. I am inclosing a manuscript for your information. You need not return. The report concerns preliminary work that has been done here. The objective is, of course, to achieve indirect selection of antibody forming capability. This is only a validation (or invalidation) of the chicken system for this purpose. This is a strange collaboration of experiments suggested by me, modified by Good & Watson, and done by Papermaster and I. Collaboration isn't for me. I also disclaim the writing style. I think it hints at my thoughts on this subject. The main problem is the lack of real knowledge about hematopoiesis. Someday soon I would like to discuss some of the points in your Science article with you.

---

Esther: Apparently Josh is too busy to include Minnesota in his stops this winter. I am assured that you will be invited to come. If those arrangements are unsatisfactory, would you visit me (with or without Josh)? I will be in N.Y. in Jan & hope to see Susman then. My very best wishes  
Gaylen
