Dr. Philip R. Edwards  
Communicable Disease Center  
Enteric Bacteriology Laboratories  
P.O. Box 185  
Chamblee, Georgia

Dear Phil,

I am sorry but I never brought any of those III,A and III,XV cultures to Ithaca. I figured there was not much use bothering with them since the apatum I transformed was nothing more than a newington and the salegridis was just another cambridge. In fact, I left all of my induced phase cultures in Lexington except a few 1,2 phases induced from 1,2,3, my phases induced from 4's, and some induced ballerup phases. Unless Alice has thrown them out all of my induced types and many of yours are still stored in that cabinet in our old laboratory. They were in the extreme left one, or the one the most distant from your old swivel chair.

Sincerely,

D.W. Bruner
