My dear Luca,

I have got both your letters & have sent you a reassuring telegram! I rang up Standfast last Friday & he said he didn't mind if your proofs were a week late & that a reasonable amount of alteration was alright, but he didn't like people wanting to rewrite their papers completely at the page-proof stage! He is a very reasonable chap & is well described by his name - nothing would rattle him, I imagine. ☺ All your alterations have gone in, including your preferred edition of the last para. & Joshua's "ineffective factor"! I presume you have retained your proof. On p. 92, l. 28, I have taken the liberty of slightly changing your amendment to "certain inhibitors (arsenate, citrate etc) of enzymes which might possibly destroy the F+ agent.....". I had already done this when your letter arrived. Did you notice a complete line had been left out at the bottom of p. 96? I have made the following alterations to Table 2. (1) In the caption "F-state" & column headings "F-condition of parents", it reads as F-(F minus) state &c. I have therefore deleted the "-" to avoid ambiguity; (2) I have indicated an additional spacing between the lines following "TLB,+ parent" & "TLB,+ S" recombinants" & suggested bracketing everything below this & covering "TLB,+ S" recombinants" to the middle of the brackets, thus:

In proof.

TLB-S ^r parent	- - - - -	etc.
TLB,+ parent	+ + + + +	etc.
TLB,+ recombinants	- - - - +	
	- - - + -	
	=====	
	=====	
	=====	
	F + T + T	

<u>Corrected proof.</u>	
TLB-S ^r parent	- - - - -
TLB,+ parent	+ + + + +
TLB,+ S ^r recombinants.	{ - - - - - - - - - + - - - + - =====
	+ + + + +

PTD.

I hope you approve of this. It will I think be easier to read. Incidentally, your total for the last column of the 1st set should be 916 & not 816. You underestimate the amount of work you did! The editor will get another final page proof &, contrary to practice, he will send this to me, so if you have anything else of a minor nature, let me know. I have written to the C.U.S. ordering 500 reprints for you & if they want immediate payment I will pay with pleasure & arrange with you later. I think that's all about the paper, except that I think it reads well & clearly. Oh! 3 important things I nearly forgot: (1) On p. 94 of the proofs, 1/2 way down the page - "Moreover, crosses between an independent occurrence of BM-F-(8) & Th8-F+ an other F+ auxotrophs were found to have a very low fertility, ----". In your original typescript I think you had "(#8)". What does this indicate & what will I put in the final proof? Or will I delete the (8)? (2) Reformas for (Davis, 1950), referring to ATCC 9637 phage!

(3) Reformas for (Cavalli, 1952) on top of p. 97, please! These are blank in the "Reformas". One other thing - Ledderhug's belief that L.L. 21-29, p. 9 of his manuscript (which is the same as the one with the proofs) is too near the American version - I have read this account in both papers; I cannot see any great similarity in phrasology, apart from the facts themselves, so have left it as it stands. If the two versions are superficially alike it is simply because the same authors have been presenting the same facts in a concise way. There are certainly no grounds for criticism.

28th. I have just received your telegram. It is nice of you to want to thank me for doing the manuscript & proof corrections & I have added - "The authors wish to thank Dr. N. Hayes for his invaluable help in correcting the manuscript & proofs of this paper" - as per telegram. Thank you! Incidentally, I wouldn't dream of sending you a bill for the telegrams. The sum was very small. Promise you will stand me a drink! You must excuse me now as I have a lot of work to do. I will write again shortly about ~~the~~ experiments.

Experiments

Yours -

Bill
